A-level CHEMISTRY

Paper 1 Inorganic and Physical Chemistry

Time allowed: 2 hours

Materials

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 105.

TOTAL			

Answer all questions in the spaces provided.	
This question is about equilibria.	
Give two features of a reaction in dynamic equilibrium.	[2 marks]
Feature 1	
A gas-phase reaction is at equilibrium. When the pressure is increased the yield of product decreases. State what can be deduced about the chemical equation for this equilibrium.	[1 mark]
Question 1 continues on the next page	
	This question is about equilibria. Give two features of a reaction in dynamic equilibrium. Feature 1 Feature 2 A gas-phase reaction is at equilibrium. When the pressure is increased the yield of product decreases. State what can be deduced about the chemical equation for this equilibrium.

0 1.3 Carbon monoxide and hydrogen react to form methanol.

$$CO(g) + 2H_2(g) \rightleftharpoons CH_3OH(g)$$

0.430 mol of carbon monoxide is mixed with 0.860 mol of hydrogen. At equilibrium, the total pressure in the flask is 250 kPa and the mixture contains 0.110 mol of methanol.

Calculate the amount, in moles, of carbon monoxide present at equilibrium.

Calculate the partial pressure, in kPa, of carbon monoxide in this equilibrium mixture.

[3 marks]

Amount of carbon monoxide	mol
· · · · · · · · · · · · · · · · · · ·	

Partial pressure kPa

0 1. Give an expression for the equilibrium constant (K_p) for this reaction.

$$CO(g) + 2H_2(g) \rightleftharpoons CH_3OH(g)$$

[1 mark]

 K_p

0	1	5

A different mixture of carbon monoxide and hydrogen is left to reach equilibrium at a temperature T.

Some data for this equilibrium are shown in **Table 1**.

Table 1

Partial pressure of CO	125 kPa
Partial pressure of CH₃OH	5.45 kPa
K _p	1.15 x 10 ⁻⁶ kPa ⁻²

$$CO(g) + 2H_2(g) \rightleftharpoons CH_3OH(g)$$

Calculate the partial pressure, in kPa, of hydrogen in this equilibrium mixture.

[3 marks]

Partial pressure	 kPa

0 1 . 6

Use the K_p value from **Table 1** to calculate a value for K_p for the following reaction at temperature T.

$$CH_3OH(g) \rightleftharpoons CO(g) + 2H_2(g)$$

Give the units for K_p

[2 marks]

K_p _____

				[2 marks]
		Relative iso	topic mass	
0 2 . 3	State why t	he isotopes of rhenium have the s	ame chemical properties.	_,
				[1 mark]

A sample of rhenium is ionised by electron impact in a time of flight (TOF) mass spectrometer.

0 2 . 4

A $^{185}Re^+$ ion with a kinetic energy of 1.153 × 10 $^{-13}\,J$ travels through a 1.450 m flight tube.

The kinetic energy of the ion is given by the equation $KE = \frac{1}{2} mv^2$

where m = mass / kg $v = \text{speed / m s}^{-1}$ KE = kinetic energy / J

Calculate the time, in seconds, for the ion to reach the detector.

The Avogadro constant, $L = 6.022 \times 10^{23} \,\mathrm{mol^{-1}}$

0 3

This question is about hydrogen peroxide, H₂O₂

The half-equation for the oxidation of hydrogen peroxide is

$$H_2O_2 \rightarrow O_2 + 2 H^+ + 2e^-$$

Hair bleach solution contains hydrogen peroxide.

A sample of hair bleach solution is diluted with water.

The concentration of hydrogen peroxide in the diluted solution is 5.00% of that in the original solution.

A 25.0 cm³ sample of the diluted hair bleach solution is acidified with dilute sulfuric acid.

This acidified sample is titrated with 0.0200 mol dm⁻³ potassium manganate(VII) solution

The reaction is complete when 35.85 cm³ of the potassium manganate(VII) solution are added.

0 3 . 1

Give an ionic equation for the reaction between potassium manganate(VII) and acidified hydrogen peroxide.

Calculate the concentration, in mol dm⁻³, of hydrogen peroxide in the original hair bleach solution.

(If you were unable to write an equation for the reaction you may assume that the mole ratio of potassium manganate(VII) to hydrogen peroxide is 3:4 This is **not** the correct mole ratio.)

[5 marks]

Concentration mol dm⁻³

0 3.2	State why an indicator is not added in this titration.	[1 mark]
0 3.3	Give the oxidation state of oxygen in hydrogen peroxide.	[1 mark]
0 3.4	Hydrogen peroxide decomposes to form water and oxygen. Give an equation for this reaction.	
	Calculate the amount, in moles, of hydrogen peroxide that would be needed to produce 185 cm³ of oxygen gas at 100 kPa and 298 K	0
	The gas constant, $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$	5 marks]
	Equation	
	Amount	_ mol

0 3 . 5

Hydrazine (N_2H_4) is used as a rocket fuel that is oxidised by hydrogen peroxide. The equation for this reaction in the gas phase is

The enthalpy change for this reaction, $\Delta H = -789 \text{ kJ mol}^{-1}$

Table 3 shows some mean bond enthalpy values.

Table 3

	N–H	N-N	N≡N	O–H
Mean bond enthalpy / kJ mol ⁻¹	388	163	944	463

Define the term mean bond enthalpy.

Use the equation and the data in **Table 3** to calculate a value for the O–O bond enthalpy in hydrogen peroxide.

[5 marks]

Table 4 shows the melting points of three substances.

Table 4

Substance	Melting point / K
sodium chloride	1074
chlorine	172
hydrogen chloride	158

Explain why the melting points of these substances are different.		
You should refer to the structure of and bonding in each substance.	[6 marks]	

15

Do not write outside the box

0 6	This question is about some elements in Group 7 and their compounds.
0 6.1	Chlorine is added to some drinking water supplies to decrease the risk of people suffering from diseases such as cholera.
	State why the amount of chlorine added must be controlled. [1 mark]
0 6.2	Give an equation for the reaction of chlorine with water to form a solution containing two acids.
	Explain, with reference to electrons, why this is a redox reaction. [2 marks]
	Equation
	Explanation
0 6.3	A student bubbles chlorine gas through a solution of sodium iodide.
	State the observation the student would make. Give an ionic equation for the reaction. [2 marks]
	Observation
	Ionic equation

	Question 6 continues on the next page	
	Ionic equation	
	Identity of gas	
	Identity of sodium halide	
	Give an ionic equation for the formation of this gas from the impurity.	[3 marks]
	Suggest the identity of the gas.	
	Deduce the identity of the sodium halide.	
0 6.5	The student adds a few drops of acidified silver nitrate solution to a solution of unknown impure sodium halide. The student observes bubbles of gas and a colourless solution. The student bubbles the gas through calcium hydroxide solution and a white precipitate forms.	of an
	Role	
	Equation 2	
	Equation 1	
	State the role of sulfuric acid in the formation of these products.	[3 marks]
	Give an equation for the formation of each of these sulfur-containing products	S.
	Two gaseous sulfur-containing products are formed.	
0 6 . 4	The student adds a few drops of concentrated sulfuric acid to a small amount solid sodium iodide.	t of

0 6 . 6	The ClF ₂ ⁺ ion contains two different Group 7 elements.		outsi b
	Use your understanding of the electron pair repulsion theory to draw the shathis ion.	ape of	
	Include any lone pairs of electrons that influence the shape.		
	Explain why the ion has the shape you have drawn.		
	Suggest a value for the bond angle in the ion.	[3 marks]	
	Shape		
	Explanation		
	Bond angle		
	Dona angle		
0 6.7	Magnesium is used in the extraction of titanium from titanium(IV) chloride.		
	Give an equation for this reaction.	[1 mark]

0 8

This question is about cells.

0 8 .

The half-equations for two electrodes that combine to make a non-rechargeable cell are

$$Zn^{2+}(aq) + 2e^- \rightarrow Zn(s)$$

$$E^{\oplus} = -0.76 \text{ V}$$

$$2 \text{MnO}_2(s) + 2 \text{NH}_4^+(aq) + 2e^- \rightarrow \text{Mn}_2\text{O}_3(s) + 2 \text{NH}_3(aq) + \text{H}_2\text{O}(l)$$

$$E^{\oplus} = +0.52 \text{ V}$$

Identify the oxidising agent in this cell.

[1 mark]

Figure 1 shows a cross-section through a rechargeable silver–zinc cell.

Figure 1

0 8 . 2 Suggest the function of the porous separator in **Figure 1**.

[1 mark]

0 8 . 3

The standard electrode potentials for two half-equations for the silver-zinc cell are

$$Ag_2O(s) + H_2O(l) + 2e^- \rightarrow 2Ag(s) + 2OH^-(aq)$$

$$E^{\oplus} = +0.34 \text{ V}$$

$$ZnO(s) + H_2O(l) + 2e^- \rightarrow Zn(s) + 2OH^-(aq)$$

$$E^{\oplus} = -1.26 \text{ V}$$

Give an equation for the overall reaction that occurs when the cell is recharging.

[1 mark]

Do not write outside the

The EMF of an alkaline hydrogen–oxygen fuel cell is +1.23 V The standard electrode potential for one of the electrodes in the alkaline hydrogen–oxygen fuel cell is

$$2H_2O(I) + 2e^- \rightarrow 2OH^-(aq) + H_2(g)$$
 $E^{\circ} = -0.83 \text{ V}$

0 8.4 Give the half-equation for the other electrode and calculate its standard electrode potential.

[2 marks]

Equation

F∘

0 8 . 5 Suggest why the EMF values of the acidic and alkaline hydrogen—oxygen fuel cells are the same.

[1 mark]
