GCSE CHEMISTRY

Higher Tier Paper 2

Time allowed: 1 hour 45 minutes

Materials

For this paper you must have:

- a ruler
- a scientific calculator
- the periodic table (enclosed).

Instructions

- Use black ink or black ball-point pen.
- Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

| 0 4 | This question is about poly(ethene) and polyesters. | Do not wr outside tl box |
|------|---|--------------------------------|
| 04.1 | Poly(ethene) is produced from ethene. Figure 3 shows part of the displayed structural formula equation for the reaction. | |
| | Complete Figure 3. [2 marks] | |
| | Figure 3 | |
| | $n \begin{array}{ccc} H & H \\ & \\ C = C \\ & \\ H & H \end{array} \longrightarrow \begin{array}{c} \left(\begin{array}{c} H & H \\ C & C \\ H & H \end{array} \right)$ | |
| 04.2 | Poly(ethene) is a thermosoftening polymer. Suggest why poly(ethene) is easier to recycle than thermosetting polymers. [2 marks] | |
| 04.3 | Ethene produces different forms of poly(ethene). How can different forms of poly(ethene) be produced from ethene? | |
| | [1 mark] | |
| | | |

| | | Do not write outside the |
|-------|---|-----------------------------|
| 0 5 | I his question is about fertilisers. | box |
| | needed for healthy plant growth. | |
| | | |
| 0 5.1 | Which two compounds each contain two of these elements? | |
| | Tick (✓) two boxes. | |
| | | |
| | | |
| | Ammonium phosphate | |
| | | |
| | | |
| | Calcium phosphate | |
| | Potassium chloride | |
| | | |
| | Potassium nitrate | |
| | | |
| | | |
| 0 5.2 | Rocks containing calcium phosphate are treated with acid to produce soluble salts | |
| | | |
| | Name the soluble salts produced when calcium phosphate reacts with: | |
| | phosphoric acid. | |
| | · · · [2 marks] | |
| | Nitric acid | |
| | | |
| | Phosphoric acid | |
| | | |
| | | |
| | | |

| 0 5.3 | Ammonium sulfate is a compound in fertilisers. |
|-------|---|
| | Ammonium sulfate can be made using an industrial process or in the laboratory. |
| | In the industrial process, the following steps are used. |
| | 1. React streams of ammonia solution and sulfuric acid together. |
| | 2. Evaporate the water by passing the solution down a warm column. |
| | 3. Collect dry crystals continuously at the bottom of the column. |
| | In the laboratory, the following steps are used. |
| | 1. React ammonia solution and sulfuric acid in a conical flask. |
| | 2. Evaporate water from the solution until crystals start to form. |
| | 3. Leave to cool and crystallise further. |
| | 4. Separate the crystals using filtration. |
| | 5. Dry the crystals between pieces of filter paper. |
| | Evaluate the two methods for producing a large mass of ammonium sulfate. [4 marks] |
