PHYA5/1R – Nuclear and Thermal Physics Mark scheme

2450 June 2015

Version 1: Final mark scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

AQA retains the copyright on all its publications. How ever, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknow ledged to a third party even for internal use within the centre.

Question Answers Additional Comments/Guida		Additional Comments/Guidance	Mark	ID details
1 (a)	A $\alpha$ particles $\checkmark$	[auto mark question]	1	
1 (b)(i)	type of radiationTypical range in air/mα0.04 ✓β0.40 ✓	allow students to use their own distance units in the table $\alpha$ allow 0.03 $\rightarrow$ 0.07 m $\beta$ allow 0.20 $\rightarrow$ 3.0 m If a range is given in the table use the larger value. A specific number is required eg not just a few cm.	2	
1 b)(ii)	reference to the <u>inverse</u> square law of (γ radiation) or reference to lowering of the solid angle (subtended by the detector as it moves away) or radiation is spread out (over a larger surface area as the detector is moved away)√	(owtte) Ignore any references to other types of radiation. Any contradiction loses the mark. For example, follows inverse square law so intensity falls exponentially.	1	
1(c)	dust may be <u>ingested/taken into</u> <u>the body/breathed in</u> ✓ causing (molecules in human tissue/cells) to be <u>made</u> <u>cancerous / killed / damaged</u> by <u>ionisation</u> ✓	first mark for ingestion not just on the body second mark for idea of <u>damage</u> from <u>ionisation</u>	2	

Total 6	
---------	--

Answers	Additional Comments/Guidance	Mark	ID details
electromagnetic/electrostatic/Coul omb (repulsion between the alpha particles and the nuclei) ✓	The interaction must be named not just described.	1	
the scattering distribution remains the same (because the alpha particles interact with a nucleus) whose charge/proton number/atomic number remains the same or the (repulsive) force remains the same	The mark requires a described distribution <u>and the reason</u> for it.	1	
Or the scattering distribution changes/becomes less distinct because there is a mixture of nuclear <u>masses</u> (which gives a mixture of nuclear recoils) ✓ (owtte)	A reference must be made to mass and not density or size.		
use of graph to find $r_0$ eg $r_0 = 6.0 \times 10^{-15} / 75^{1/3} \checkmark$ (or $8.0 \times 10^{-15} / 175^{1/3}$ ) ( $r_0 = 1.43 \times 10^{-15}$ m)	Substitution and calculation t must be shown. Condone a gradient calculation on <u><i>R</i> against <math>A^{1/3}</math> graph (not graph of Fig 1) as <math>R \propto A^{1/3}</math></u>	1	
scalate if clip shows <sup>27</sup> / <sub>12</sub> Al in the	auestion aiving $R \approx 4 \times 10^{-15}$ m.		
$(\text{using } R = r_0 A^{1/3})$ $R = 1.43 \times 10^{-15} \times 51^{1/3} \checkmark$ $R = 5.3 \times 10^{-15} \text{ (m) } \checkmark$ $(R = 5.2 \times 10^{-15} \text{ m from}$ $r_0 = 1.4 \times 10^{-15} \text{ m})$	first mark for working second mark for evaluation which must be 2 or more sig figs allow CE from b(i) $R = 3.71 \times b(i)$ <b>Possible escalation</b>	2	
alate if clip shows $^{27}_{13}$ Al in the qu	estion and/or the use of 27 in the	ne work	ing.
density = mass / volume $m = 51 \times 1.67 \times 10^{-27}$ (= 8.5 × 10 <sup>-26</sup> kg) $v = 4/3\pi (5.3 \times 10^{-15})^3$ (6.2(4) × 10 <sup>-43</sup> m <sup>3</sup> ) Or	give the first mark for substitution of data into the top line or bottom line of the calculation of density. In the second alternative the mark for the substitution is only given if the working equation is given as well. $51 \times 1.67 \times 10^{-27}$ would gain a	3	
	electromagnetic/electrostatic/Coul omb (repulsion between the alpha particles and the nuclei) $\checkmark$ the scattering distribution remains the same (because the alpha particles interact with a nucleus) whose charge/proton number/atomic number remains the same or the (repulsive) force remains the same Or the scattering distribution changes/becomes less distinct because there is a mixture of nuclear <u>masses</u> (which gives a mixture of nuclear recoils) $\checkmark$ (owtte) use of graph to find $r_0$ eg $r_0 = 6.0 \times 10^{-15} / 75^{1/3} \checkmark$ (or $8.0 \times 10^{-15} / 175^{1/3}$ ) ( $r_0 = 1.43 \times 10^{-15}$ m) <b>scalate if clip shows</b> ${}^{27}_{13}$ Al in the (using $R = r_0 A^{1/3}$ ) $R = 1.43 \times 10^{-15} \times 51^{1/3} \checkmark$ $R = 5.3 \times 10^{-15}$ (m) $\checkmark$ ( $R = 5.2 \times 10^{-15}$ m from $r_0 = 1.4 \times 10^{-15}$ m) <b>state if clip shows</b> ${}^{27}_{13}$ Al in the qu density = mass / volume $m = 51 \times 1.67 \times 10^{-27}$ ( $= 8.5 \times 10^{-26}$ kg) $v = 4/3\pi(5.3 \times 10^{-15})^3$ ( $6.2(4) \times 10^{-43}$ m <sup>3</sup> )	AnswersComments/Guidanceelectromagnetic/electrostatic/Coul omb (repulsion between the alpha particles and the nuclei) $\checkmark$ The interaction must be named not just described.the scattering distribution remains the same or the (repulsive) force remains the same or the reased (at the same of nuclear masses (which gives a mixture of nuclear recoils) $\checkmark$ A reference must be made to mass and not density or size.Use of graph to find $f_0$ ( $\sigma_0 = 0.0 \times 10^{15} / 75^{1/3} \checkmark$ ( $\sigma = 0.0 \times 10^{15} / 75^{1/3} \checkmark$ ( $r_0 = 1.43 \times 10^{15} m$ )Substitution and calculation t must be shown. ( $R = 5.2 \times 10^{15}$ m from $f_0 = 1.4 \times 10^{15}$ m)first mark for working second mark for evaluation which must be 2 or more sig figs allow CE from b(i) $R = 3.71 \times b(i)$ Possible escalation2tate if clip shows $\frac{27}{3}$ Al in the question and/or the use of 27 in the work ( $R = 5.2 \times 10^{15}$ m from $f_0 = 1.4 \times 10^{15}$ m)3tate if clip shows $\frac{27}{3}$ Al in the question and/or the use of 27 in the work ( $R = 5.5 \times 10^{26}$ kg)3tate if clip shows $\frac{27}{3}$ Al in the question and/or the use of 27 in the work ( $R = 5.5 \times 10^{26}$ kg)3tate if clip

$= u / 4/3\pi (r_0)^3$	would need u / $4/3\pi (r_0)^3$ as well		
top line = $1.66 \times 10^{-27}$ bottom line = $4/3\pi (1.43 \times 10^{-15})^3$	to gain the mark. Expect a large spread of possible answers. For example If $R = 5 \times 10^{-15}$ V = 5.24 × 10 <sup>-43</sup>		
$\checkmark$ for one substitution	and density = $1.63 \times 10^{17}$ <b>Possible escalation</b>		
density = $1.4 \times 10^{17}$ $\checkmark$ (1.37 $\times 10^{17}$ ) kg m <sup>-3</sup> $\checkmark$			
		8	]

Question	Answers	Additional Comments/Guidance	Mark	ID details
3(a)	${}^{239}_{93}\text{Np} \to {}^{239}_{94}\text{Pu} + {}^{(0)}_{(-1)}\beta^{-} + {}^{(0)}_{(0)}\overline{\nu}\checkmark\checkmark$	First mark for one anti-neutrino or one beta minus particle in any form eg. e <sup>-</sup> . If subscript and superscripts are given for these they must be correct but ignore the type of neutrino if indicated. The second mark is for both particles and the rest of the equation. Ignore the full sequence if it is shown but the Np to Pu must be given separately for the mark.	2	
3(b)(i)	$T_{1/2} 2.0 \rightarrow 2.1 \times 10^{5} \text{ s } \checkmark$ then substitute and calculate $\lambda = \ln 2 / T_{1/2} \checkmark$ Or (substitute two points from the graph into $A = A_0 e^{-\lambda t}$ ) e.g. 0.77 × 10 <sup>12</sup> = 4.25 × 10 <sup>12</sup> exp(-λ×5×10 <sup>5</sup> ) ✓ then make $\lambda$ the subject and	$T_{1/2}$ may be determined from graph not starting at zero time. Look for the correct power of 10 in the half-life – possible AE. Allow the rare alternative of using the time constant of the decay $A = A_0 \exp(-t/t_{tc})$ from graph $t_{tc} = 2.9 \rightarrow 3.1 \times 10^5 \text{ s} \checkmark$ $\lambda = 1/t_{tc} = 3.4 \times 10^{-6} \text{ s}^{-1} \checkmark$	2	

	calculate ✓			
	( the rearrangement looks like $\lambda = [\ln (A_o / A)] / t$ or $\lambda = - [\ln (A / A_o)] / t$ )	No CE is allowed within this question.		
	both alternatives give $\lambda = 3.3 \rightarrow 3.5 \times 10^{-6} \text{ s}^{-1} \checkmark$	For reference $T_{1/2} = 2.0 \times 10^5$ s gives $\lambda = 3.5 \times 10^{-6} \text{ s}^{-1}$ and $T_{1/2} = 2.1 \times 10^5$ s gives $\lambda = 3.3 \times 10^{-6} \text{ s}^{-1}$		
3(b)(ii)	(using $A = N\lambda$ $N = 0.77 \times 10^{12} / 3.4 \times 10^{-6}$ $= 2.2(6) \times 10^{17}$ ) allow 2.2 → 2.4 × 10 <sup>17</sup> nuclei ✓	A possible route is find $N_o = A_o/\lambda$ then use $N = N_o e^{-\lambda t}$ condone lone answer	1	
3 (c)(i)	<u>uranium</u> (– 235 captures) a <u>neutron</u> ( and splits into 2 smaller nuclei/fission fragments) <u>releasing</u> <u>more neutrons</u> ✓	first mark for uranium + neutron gives more neutrons Ignore which isotope of uranium is used.	2	
	(at least one of) <u>these neutrons</u> go on to cause further/more <u>splitting/fissioning</u> (of uranium– 235) ✓	second mark for released neutron causes more fission The word 'reaction' may replace 'fission' here provided 'fission/splitting of uranium' is given somewhere in the answer.		
3 (c)(ii) E	scalate if clip shows critical ma	ss in the question.		
3 (c)(ii)	the moderator slows down/reduces the kinetic energy of <u>neutrons</u> ✓ so neutrons are absorbed/react/fission (efficiently) by the <u>uranium/fuel</u> ✓	owtte Possible escalation	2	
3 (c)(iii)	<u>neutrons</u> are absorbed/collide with (by the nuclei in the shielding) ✓	Second mark is only given if neutrons appear somewhere in the answer.	2	
	converting the nuclei/atoms (of the shielding) into unstable isotopes (owtte) ✓	No neutrons = no marks making it neutron rich implies making them unstable.
