Afternoon

1 hour 30 minutes

Additional materials:

8 page answer booklet

Graph paper

MEI Examination Formulae and Tables (MF2)

**TIME** 1 hour 30 minutes

**INSTRUCTIONS TO CANDIDATES**

- Write your name, centre number and candidate number in the spaces provided on the answer booklet.
- Answer **all** the questions.
- There is an **insert** for use in Question **12**.
- You are permitted to use a graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

**INFORMATION FOR CANDIDATES**

- The number of marks is given in brackets [ ] at the end of each question or part question.
- You are advised that an answer may receive **no marks** unless you show sufficient detail of the working to indicate that a correct method is being used.
- The total number of marks for this paper is 72.

---

**This question paper consists of 4 printed pages and an insert.**

## Section A (36 marks)

- 1 Write down the values of  $\log_a a$  and  $\log_a (a^3)$ . [2]
- 2 The first term of a geometric series is 8. The sum to infinity of the series is 10.  
Find the common ratio. [3]
- 3  $\theta$  is an acute angle and  $\sin \theta = \frac{1}{4}$ . Find the exact value of  $\tan \theta$ . [3]
- 4 Find  $\int_1^2 \left( x^4 - \frac{3}{x^2} + 1 \right) dx$ , showing your working. [5]
- 5 The gradient of a curve is given by  $\frac{dy}{dx} = 3 - x^2$ . The curve passes through the point (6, 1). Find the equation of the curve. [4]
- 6 A sequence is given by the following.
- $$u_1 = 3$$
- $$u_{n+1} = u_n + 5$$
- (i) Write down the first 4 terms of this sequence. [1]
- (ii) Find the sum of the 51st to the 100th terms, inclusive, of the sequence. [4]
- 7 (i) Sketch the graph of  $y = \cos x$  for  $0^\circ \leq x \leq 360^\circ$ .  
On the same axes, sketch the graph of  $y = \cos 2x$  for  $0^\circ \leq x \leq 360^\circ$ . Label each graph clearly. [3]
- (ii) Solve the equation  $\cos 2x = 0.5$  for  $0^\circ \leq x \leq 360^\circ$ . [2]
- 8 Given that  $y = 6x^3 + \sqrt{x} + 3$ , find  $\frac{dy}{dx}$  and  $\frac{d^2y}{dx^2}$ . [5]
- 9 Use logarithms to solve the equation  $5^{3x} = 100$ . Give your answer correct to 3 decimal places. [4]

## Section B (36 marks)

10 (i)

Fig. 10.1

At a certain time, ship S is 5.2 km from lighthouse L on a bearing of  $048^\circ$ . At the same time, ship T is 6.3 km from L on a bearing of  $105^\circ$ , as shown in Fig. 10.1.

For these positions, calculate

(A) the distance between ships S and T, [3]

(B) the bearing of S from T. [3]

(ii)

Fig. 10.2

Ship S then travels at  $24 \text{ km h}^{-1}$  anticlockwise along the arc of a circle, keeping 5.2 km from the lighthouse L, as shown in Fig. 10.2.

Find, in radians, the angle  $\theta$  that the line LS has turned through in 26 minutes.

Hence find, in degrees, the bearing of ship S from the lighthouse at this time. [5]

**11** A cubic curve has equation  $y = x^3 - 3x^2 + 1$ .

(i) Use calculus to find the coordinates of the turning points on this curve. Determine the nature of these turning points. [5]

(ii) Show that the tangent to the curve at the point where  $x = -1$  has gradient 9.

Find the coordinates of the other point, P, on the curve at which the tangent has gradient 9 and find the equation of the normal to the curve at P.

Show that the area of the triangle bounded by the normal at P and the  $x$ - and  $y$ -axes is 8 square units. [8]

**12** Answer the whole of this question on the insert provided.

A colony of bats is increasing. The population,  $P$ , is modelled by  $P = a \times 10^{bt}$ , where  $t$  is the time in years after 2000.

(i) Show that, according to this model, the graph of  $\log_{10} P$  against  $t$  should be a straight line of gradient  $b$ . State, in terms of  $a$ , the intercept on the vertical axis. [3]

(ii) The table gives the data for the population from 2001 to 2005.

Year	2001	2002	2003	2004	2005
$t$	1	2	3	4	5
$P$	7900	8800	10000	11 300	12 800

Complete the table of values on the insert, and plot  $\log_{10} P$  against  $t$ . Draw a line of best fit for the data. [3]

(iii) Use your graph to find the equation for  $P$  in terms of  $t$ . [4]

(iv) Predict the population in 2008 according to this model. [2]
