

Mark Scheme (Results)

Summer 2013

International GCSE Physics (4PH0) Paper 2PR

ALWAYS LEARNING

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u> for our BTEC qualifications.

Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson. Their contact details can be found on this link: <u>www.edexcel.com/teachingservices</u>.

You can also use our online Ask the Expert service at <u>www.edexcel.com/ask</u>. You will need an Edexcel username and password to access this service.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Summer 2013 Publications Code UG036620 All the material in this publication is copyright © Pearson Education Ltd 2013

Question number		Answer	Notes	Marks
1 (a)	А	activity		1
	А	alpha particle		1
(b)	В	beta particle		
(c)				1
(d)	А	alpha particle		1
			Total	4

Question number	Answer	Notes	Marks
2 (a)	В		1
(b) (i)	<pre>#1. states principle of moments ; #2. moment= force X (perpendicular) distance from pivot: #3. calculates one moment about either A or B; #4. takes moments at B; force A force B force B</pre>	Ignore bald '500/2 =250' Accept for #2: in words or in recognisable symbols or in numbers from the diagram	4
	 e.g. moments clockwise = moments anticlockwise moment = weight x distance 500 x 1 1 x 500 = Ax2 	Accept qualitative alternative for last 2 marking points: '2 forces so divide weight in half' OWTTE = 1 mark if then qualified by distance consideration = 2 marks	
(ii)	Upward Force at point B 250(N);	allow arrow for clockwise or anticlockwise	1

Question number	Answer	Notes	Marks
(c) i	Arrow down from painter; (vertical, below feet)	force A force B weight of plank	1
		force A Parter force B weight of plank =0	
ii	Both forces increase;		
	Force at B larger than force at A / RA ;	ignore: • both moments increase • 'force B is larger'	2
		Total	9

Question number	Answer	Notes	Marks
3 (a) i ii	Any ONE sensible suggestion from ensuring good contact; increasing friction; increasing pressure; Keep a fair test / controlled variable;	 allow: to prevent slipping sideways make it easier to control 	1
		allow: it not an independent variable ignore: all mention of accuracy	

Question number	Answer	Notes	Marks
3 (b) (i)	(Type of) surface(s);	 do not accept: a (single) named surface type of block 	1
(ii)	4.5;	material of block	
(iii)	Axes labelled- quantity and unit; Linear scale such that longest bar occupies at least half the grid;	allow force (N) force/N	
	Plottingignore order of bars 5 bars correctly plotted;; If only 3 bars correctly plotted allow 1 mark for plotting	tolerance is +/- 0.5 small sq allow ecf from table	4
(Average) force in N	6 6 6 6 6 6 6 6 6 6 6 7 0	ALL data plotted correctly as floating "x's" gets only one mark for plotting Reject both plotting marks if a line graph is drawn (only scale and axes marks are available in this case) $\boxed{\begin{array}{c} \hline \textbf{Type of surface} & \textbf{Average} \\ \hline alticle and altown are available on a set of the s$	
	(Type of) Surface		

number Ignore: 3 (c) Any two of the following five ideas: Ignore: 3 (c) Any two of the following five ideas: Ignore: #1 different experimental set-up; e.g. • unqualified 'broken N- meter' • human error • different kind of wooden block • human error • human error • different speed of pull * the surfaces were not uniformly smooth • the wooden block did not move evenly across the surface #3 errors in the force meter reading; e.g. • e.g. • surface area of surface #3 errors in the force meter reading; e.g. • errors recording the force on the N-meter • faulty scale on N-meter • faulty scale on N-meter • zero errors / different ranges of N-meters used • different contact; e.g. • different contact; e.g. • g.g. • the weights on the block may not have been evenly placed on the block • the block was not pressed down onto the surface evenly	Question	Answer	Notes	Marks
#1 different experimental set-up; e.g.Ignore:#1 different masses/weights• unqualified 'broken N- meter'• different masses/weights• human error• different speed of pull• human error#2 variable friction; e.g.• anomalous results• the surfaces were not uniformly smooth • the wooden block did not move evenly across the surface• surface area of surface#3 errors in the force meter reading; e.g.• errors recording the force on the N-meter • faulty scale on N-meter• surface#4 different angle of N-meter#4 different contact; e.g.• the weights on the block may not have been evenly placed on the block• the weights on the block may not have been evenly placed on the block	number			
 #5 friction reduces as the experiment progresses; e.g. the wooden block becomes smoother as the experiment proceeds it moves over the surface more easily as the experiment progresses lubricant on block 		 #1 different experimental set-up; e.g. different masses/weights different kind of wooden block different speed of pull #2 variable friction; e.g. the surfaces were not uniformly smooth the wooden block did not move evenly across the surface #3 errors in the force meter reading; e.g. errors recording the force on the N-meter faulty scale on N-meter zero errors / different ranges of N-meters used different angle of N-meter #4 different contact; e.g. the weights on the block may not have been evenly placed on the block the block was not pressed down onto the surface evenly #5 friction reduces as the experiment progresses; e.g. the wooden block becomes smoother as the experiment proceeds it moves over the surface more easily as the experiment progresses 	 unqualified 'broken N- meter' human error 'strength of pull' anomalous results surface area of 	2

Question number	Answer	Notes	Marks
3 (d)	Any two from: Pressure less; Area larger; Use of formula P =F/A;	Load is the same/wood is thinner	2
(e)	Any TWO sensible suggestions;; e.g. place a lubricant between the two surfaces make the surfaces smoother decrease weights /masses on block	allow: named lubricants change the surfaces so that are not so rough reduce the area (of contact) decrease mass of block	2
		Total	14

Question number	Answer	Notes	Marks
4 (a)	C Silver		1
(b)	Must be in the correct context Any two from:	Do not award marks for repeat of stem Accept: lifting sheet for A, metal plate for B	
	 negative charge moves or electrons move; (charge moves through wire) from plate B / to lifting sheet A; therefore produces unbalanced /net charge on A/B; 	charge is not enough for first MP A has gained electrons /B has lost electrons for 2 marks	
		Ignore references to 'poles' 'current' Reject ideas about positive charge moving	2

Question number	Answer	Notes	Marks
4 (c)	Must be in the correct context Any two from	Ignore unqualified 'opposite charges attract'	
	 (top of) dust becomes positive; negative charge on lifting sheet A attracts dust; force of attraction > weight of dust; 	allow an answer in terms of charge separation e.g. induced charge on dust ('top' positive 'bottom' negative)	2
(d)	 Answers must be in the context of the stream of water and charged rod the water (molecules) have a charge; opposite charges attract / like charges repel; 	do not credit repeat of stem allow (negatively) charged rod attracts (positively) charged water	2
		Total	7

Question number	Answer	Notes	Marks
5 (a) (i)	idea that Energy source which cannot be replaced ;	 allow: can't be used again supply is limited in time can't be replenished (for a long time) can't be regenerated ignore: 	1
		 can't be recycled can't be stored unqualified 'finite/limited/will run out' not sustainable can be used up 	
(ii)	Any from for 1 mark; Coal Oil or named fuel Gas	allow: crude oil fossil (fuel(s)) petrol diesel gasoline kerosene paraffin methane butane propane ignore: burning fuel(s)	1

	Questi numbe		Answer	Notes	Marks
5	(b)	(i)	 AT WIND FARM: any one from Step-up transformer used at the wind farm; 	allow: description of a transformer	3
			 voltage increased (for transmission); 		
			DURING TRANSMISSION: any one from	Allow small voltage loss in transmission	
			 transmitted at (high voltage and) low current; 		
			 no/little energy is wasted during transmission; 		
			AT CITY END: any one from		
			• Step down transformer at 'other end'/OWTTE;		
			 voltage reduced to 230V/for safety/for homes; 		

Question number	Answer	Notes	Marks
5 (b) (ii)	 Answer to a maximum of SIX marks to include: up to 4 ideas from advantages and up to 4 ideas from disadvantages Annotate with ticks /underlining advantages 1. Renewable energy resource; 2. No /little carbon emission or air pollution <i>OR</i> will not add to global warming OR little pollution; 3. Source of energy is free <i>OR</i> low running costs; 4. Brings employment/construction to some remote areas <i>OR</i> good for the local economy; 5. Lots of energy available OR abundant source <i>OR</i> wind farm can generate large amounts of electricity; 6. wind turbines can be more efficient than conventional power stations; disadvantages 1. Unsightly/ugly <i>OR</i> can damage views/ blight landscapes / local people may find them an intrusion; 2. Can be noisy/ causes noise pollution; 3. Only work when the wind blows/ above certain wind speed <i>OR</i> no constant output of electricity OR not reliable; 4. Each generator can only generate a small amount of electricity <i>R</i> many are needed to supply the amount of electricity required for a city; 5. Costly to construct /maintain; 6. can only be placed in certain areas OR require large areas; 	If a single word list, penalise by ONE mark accept suitable/sensible alternatives ignore: • environmentally friendly • cheaper than fossil fuels • kills birds /harming animals • unqualified 'expensive' /'high costs' • safer • carbon-neutral • unqualified 'more efficient'/ 'high efficiency'	6
		illai	

Question number	Answer	Notes	Marks
6 (a) (i)	Momentum = mxv; Substitution into correct equation; Evaluation;	in words or in recognisable symbols	1
(ii)	Evaluation, consistent unit; E.g. Momentum = 0.1 x 3 Solution 0.3 kg m/s	Allow: use of g (\rightarrow 300) but unit <i>must</i> match allow: • kg m s ⁻¹ • N s	3
(111)	Momentum is conserved	ignore: • because it has the same mass and velocity any discussion of energy	1
(b)	prediction: Two balls at the opposite end of the cradle move up/away; (balls D and E rise up)	Allow: E moves off with 2v	2
	 any one sensible reason: idea that momentum is still conserved in this collision total momentum of the system is constant there is twice the momentum of one ball so the momentum is transferred to two balls; 	ignore 'the other balls remain still' inelastic (collisions) mention of energy 	
		Total	7

Question number	Answer	Notes	Marks
7 (a)	 standard definition of wavelength; e.g. distance between two points on a wave/ two peaks/ two troughs distance between each wavefront distance travelled by wave in one time period 	allow: from clear diagram crest for peak ignore: • 'the length of a wave' • 'distance taken for 1 cycle' • distance between one wave and the next one	1
7 (bi)	Speed of wave = frequency x wavelength;	allow: in any rearrangement $v = f.\lambda$	1
(bii)	substitution into any form of the equation ; evaluation;	accont for 1 mark	
	e.g. $3(m/s) = 1.5(Hz) \times \lambda$ $(\lambda) = 2(m);$	accept for 1 mark <u>3</u> 1.5	2

Question number	Answer	Notes	Marks
7 (ci)	 Diffraction; And one of The incoming wave spreads out at the gap; The energy carried by the wave spreads out ; 	 allow: diffraction seen in (cii) recognisable spelling for 'diffraction' ignore: the wave gets bigger wave is bent (wavefront is) curved 	2
7 (cii)	idea that (diffraction only apparent when) λ and size of gap comparable/RA; wavelength of light is very small / smaller than water waves /smaller than the gap;	Allow RA	2
		Total	9
