The value,  $V$  pounds, of a mobile phone,  $t$  months after it was bought, is modelled by

$$V = ab^t$$

**13.** On a roller coaster ride, passengers travel in carriages around a track.

On the ride, carriages complete multiple circuits of the track such that

- the maximum vertical height of a carriage above the ground is 60 m
- a carriage starts a circuit at a vertical height of 2 m above the ground
- the ground is horizontal

The vertical height,  $H$  m, of a carriage above the ground,  $t$  seconds after the carriage starts the first circuit, is modelled by the equation

$$H = a - b(t - 20)^2$$

where  $a$  and  $b$  are positive constants.

(a) Find a complete equation for the model. (3)

(b) Use the model to determine the height of the carriage above the ground when  $t = 40$ . (1)

In an alternative model, the vertical height,  $H$  m, of a carriage above the ground,  $t$  seconds after the carriage starts the first circuit, is given by

$$H = 29 \cos(9t + \alpha)^\circ + \beta \quad 0 \leq \alpha < 360^\circ$$

where  $\alpha$  and  $\beta$  are constants.

(c) Find a complete equation for the alternative model. (2)

Given that the carriage moves continuously for 2 minutes,

(d) give a reason why the alternative model would be more appropriate. (1)

15. A curve has equation  $y = f(x)$ , where

$$f(x) = \frac{7xe^x}{\sqrt{e^{3x} - 2}} \quad x > \ln \sqrt[3]{2}$$

(a) Show that

$$f'(x) = \frac{7e^x(e^{3x}(2-x) + Ax + B)}{2(e^{3x} - 2)^{\frac{3}{2}}}$$

where  $A$  and  $B$  are constants to be found.

(5)

(b) Hence show that the  $x$  coordinates of the turning points of the curve are solutions of the equation

$$x = \frac{2e^{3x} - 4}{e^{3x} + 4}$$

(2)

The equation  $x = \frac{2e^{3x} - 4}{e^{3x} + 4}$  has two positive roots  $\alpha$  and  $\beta$  where  $\beta > \alpha$

A student uses the iteration formula

$$x_{n+1} = \frac{2e^{3x_n} - 4}{e^{3x_n} + 4}$$

in an attempt to find approximations for  $\alpha$  and  $\beta$

Diagram 1 shows a plot of part of the curve with equation  $y = \frac{2e^{3x} - 4}{e^{3x} + 4}$  and part of the line with equation  $y = x$

Using Diagram 1 on page 42

(c) draw a staircase diagram to show that the iteration formula starting with  $x_1 = 1$  can be used to find an approximation for  $\beta$

(1)

Use the iteration formula with  $x_1 = 1$ , to find, to 3 decimal places,

(d) (i) the value of  $x_2$

(ii) the value of  $\beta$

(3)

Using a suitable interval and a suitable function that should be stated

(e) show that  $\alpha = 0.432$  to 3 decimal places.
