A-level CHEMISTRY

Paper 3

Time allowed: 2 hours

Materials

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- · All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 90.

Advice

You are advised to spend 70 minutes on Section A and 50 minutes on Section B.

Section A

Answer all questions in this section.

- 0 1 A value for enthalpy of solution can be determined in two ways:
 - from a cycle, using lattice enthalpy and enthalpies of hydration
 - from the results of a calorimetry experiment.

0	1	′	1	Define the term	enthalpy	of lattice	dissociation
---	---	---	---	-----------------	----------	------------	--------------

[2 marks]

1 . 2 The enthalpy of solution for ammonium nitrate is the enthalpy change for the reaction shown.

$$NH_4NO_3(s) + aq \rightarrow NH_4^+(aq) + NO_3^-(aq)$$
 $\Delta H = +26 \text{ kJ mol}^{-1}$

Table 1

	NH ₄ ⁺ (g)	NO ₃ ⁻ (g)
Enthalpy of hydration $\Delta_{hyd}H/kJ \text{ mol}^{-1}$	-307	-314

Draw a suitably labelled cycle and use it, with data from **Table 1**, to calculate the enthalpy of lattice dissociation for ammonium nitrate.

[3 marks]

Enthalpy of lattice dissociation kJ mol⁻¹

0 1 . 3

A student does an experiment to determine a value for the enthalpy of solution for ammonium nitrate.

The student uses this method.

- Measure 25.0 cm³ of distilled water in a measuring cylinder.
- Pour the water into a beaker.
- Record the temperature of the water in the beaker.
- Add 4.00 g of solid NH₄NO₃ to the water in the beaker.
- Stir the solution and record the lowest temperature reached.

Table 2 shows the student's results.

Table 2

Initial temperature / °C	20.2
Lowest temperature / °C	12.2

Calculate the enthalpy of solution, in kJ mol⁻¹, for ammonium nitrate in this experiment.

Assume that the specific heat capacity of the solution, $c = 4.18 \text{ J K}^{-1} \text{ g}^{-1}$

Assume that the density of the solution = 1.00 g cm^{-3}

[3 marks]

Enthalpy of solution kJ mol⁻¹

0 1.4	The uncertainty in each of the temperature readings from the thermometer used in this experiment is ±0.1°C
	Calculate the percentage uncertainty in the temperature change in this experiment. [1 mark]
	ן ווומוגן
	Percentage uncertainty
0 1.5	Suggest a change to the student's method, using the same apparatus, that would reduce the percentage uncertainty in the temperature change.
	Give a reason for your answer. [2 marks]
	Change
	Reason
0 1.6	Another student obtained a value of +15 kJ mol ⁻¹ using the same method.
	Suggest the main reason for the difference between this experimental value for the enthalpy of solution and the correct value of +26 kJ mol ⁻¹
	[1 mark]
	Question 1 continues on the next page
	. •

0 1. 7 Table 3 shows some entropy data at 298 K

Table 3

	Entropy S/JK ⁻¹ mol ⁻¹
NH ₄ NO ₃ (s)	151
NH ₄ +(aq)	113
NO ₃ -(aq)	146

Calculate a value for the Gibbs free-energy change (ΔG), at 298 K, for the reaction when ammonium nitrate dissolves in water.

$$NH_4NO_3(s) + aq \rightarrow NH_4^+(aq) + NO_3^-(aq)$$
 $\Delta H = +26 \text{ kJ mol}^{-1}$

Use data from **Table 3** and the value of ΔH from the equation. Assume for the solvent, water, that the entropy change, $\Delta S = 0$

Explain what the calculated value of ΔG indicates about the feasibility of this reaction at 298 K

[4 marks]

	Δ G	kJ mol ⁻¹
Explanation		

0 1.8 Ammonium nitrate decomposes as shown.

$$NH_4NO_3(s) \to N_2(g) + \frac{1}{2}\,O_2(g) + 2\,H_2O(g) \hspace{0.5cm} \Delta H = +123 \text{ kJ mol}^{-1}$$

The entropy change (ΔS) for this reaction is +144 J K⁻¹ mol⁻¹

Calculate the temperature at which this reaction becomes feasible.

[2 marks]

Temperature K

0 2

Tschermigite is a hydrated, water-soluble mineral, with relative formula mass of 453.2

The formula of tschermigite can be represented as $M.xH_2O$, where M represents all the ions present.

Table 4 shows its composition by mass.

Table 4

Element	% by mass
N	3.09
Н	6.18
Al	5.96
S	14.16
0	70.61

In an analysis, it is found that the mineral contains the ions NH₄+, Al³⁺ and SO₄²⁻

Calculate the empirical formula of tschermigite and the value of x in M.xH₂O

Describe the tests, with their results, including ionic equations, that would confirm the identities of the ions present.

0 4	Hydrogen peroxide solution decomposes to form water and oxygen.
	$2H_2O_2(aq) \rightarrow 2H_2O(I) + O_2(g)$
	The reaction is catalysed by manganese(IV) oxide.
	A student determines the order of this reaction with respect to hydrogen peroxide. The student uses a continuous monitoring method in the experiment.
	The student places hydrogen peroxide solution in a conical flask with the catalyst and uses a gas syringe to collect the oxygen formed. The student records the volume of oxygen every 10 seconds for 100 seconds.
0 4 . 1	Explain why the reaction is fastest at the start. [2 marks]
	l l

0 4.2 The graph in **Figure 1** shows how the concentration of hydrogen peroxide changes with time in this experiment.

Tangents to the curve in **Figure 1** can be used to determine rates of reaction.

Draw a tangent to the curve when the concentration of hydrogen peroxide solution is $0.05 \ \text{mol} \ dm^{-3}$

Use your tangent to calculate the gradient of the curve at this point.

[2 marks]

Gradient mol dm⁻³ s⁻¹

Question 4 continues on the next page

0 4 . 3

The concentration of hydrogen peroxide solution at time *t* during the experiment can be calculated using this expression.

$$\begin{bmatrix} \mathbf{H}_2 \mathbf{O}_2 \end{bmatrix}_t = \begin{bmatrix} \mathbf{H}_2 \mathbf{O}_2 \end{bmatrix}_{\mathsf{initial}} \left(\frac{V_{\mathsf{max}} - V_t}{V_{\mathsf{max}}} \right)$$

 $\left[{\rm H_2O_2} \right]_t$ = concentration of hydrogen peroxide solution at time t / mol dm⁻³

 $\left[\mathrm{H_2O_2}\right]_{\mathrm{initial}}$ = concentration of hydrogen peroxide solution at the start / mol dm $^{-3}$

 $V_{\rm max}$ = total volume of oxygen gas collected during the whole experiment / cm 3

 V_t = volume of oxygen gas collected at time t / cm³

In this experiment, $V_{\text{max}} = 100 \text{ cm}^3$

Use **Figure 1** and the expression to calculate $[H_2O_2]_t$ when 20 cm³ of oxygen has been collected.

[2 marks]

$[H_2O_2]_t$	mol dm ⁻³
L 2 23(IIIOI UIII

Table 5 shows data from a similar experiment.

Table 5

[H ₂ O ₂] / mol dm ⁻³	0.02	0.03	0.05	0.07	0.09

	A Kevlar	0
	B Nylon 6,6	0
	C Poly(propene)	0
	D Terylene	0

2 9	Which is the main species present in an aqueous solution of aspartic	acid at pH = 14? [1 mark]
	CH ₂ COOH	
	$\mathbf{A} \ H - $	0
	СООН	
	CH ₂ COOH	
	B H—C—NH ₃	0
	СООН	
	CH ₂ COOH	
	CH ₂ COOH C H—C— NH ₃ COO-	0
	COO-	
	CH ₂ COO ⁻	
	D H—C—NH ₂	0
	COO-	
3 0	COCH ₃ COCH ₃ CH(OH)CH ₃ CH(OCOCH ₃)CH	1 2
		.5
	NO_2 NO_2 NO_2	
	Which type of reaction is not involved in this reaction sequence?	[1 mark]
	A catavification	
	A esterification	
	B hydrolysis C nitration	0
	D reduction	
	D TEGUCTION	

Do not write outside the box

3 1	Which pair of reagents does not produce ethanol?	[1 mark]
	A CH₃CH₂Br and NaOH(aq)	0
	B CH₃COOCH₃ and NaOH(aq)	0
	C HCOOCH₂CH₃ and NaOH(aq)	0
	D CH ₃ CHO and NaBH ₄ (aq)	0
3 2	Which type of interaction between polypeptide chains is mainly respo maintaining the secondary structure of a protein in the form of an alph	
	A covalent bonds	0
	B hydrogen bonds	0
	C ionic interactions	0
	D van der Waals forces	0
3 3	Which statement about HOCH ₂ CH(NH ₂)COOH is correct?	[1 mark]
	A It decolourises bromine water.	0
	B It is a component of DNA.	0
	C It is insoluble in water.	0
	D It reacts with hydrochloric acid.	0

3 4	Which compound can be dehydrated to form an alkene?	[1 mark]	Do not write outside the box
	A CH₃CHO	0	
	B CH₃COOH	0	
	C CH ₃ CH ₂ OH	0	
	D CH ₃ COOCH ₃	0	
3 5	Which compound is not a 2-aminocarboxylic acid?	[1 mark]	
	A CH ₃ CH(NH ₂)COOH	0	
	B CH ₃ CH(NH ₂)CH ₂ COOH	0	
	C CH ₃ CH ₂ CH(NH ₂)COOH	0	
	D (CH ₃) ₂ CHCH(NH ₂)COOH	0	30
