Note: You would award: B1M1A0 for

$$= \frac{\frac{1}{27}}{\left\{1+(-3)(\frac{2x}{3})+\frac{(-3)(-4)}{2!}(2x)^2+\frac{(-3)(-4)(-5)}{3!}(2x)^3+\ldots\right\}}$$

because ** is not consistent.

Special Case: If you see the constant $\frac{1}{27}$ in a candidate's final binomial expression, then you can award B1

Attempts using Maclaurin expansions need to be escalated up to your team leader.

If you feel the mark scheme does not apply fairly to a candidate please escalate the response up to your team leader.

Special Case: If you see the constant $\frac{1}{27}$ in a candidate's final binomial expression, then you can award B1

If you see this **integration** applied anywhere in a candidate's working then you can award M1, A1

There are other acceptable answers for A1, eg: $\frac{1}{\frac{2\ln 8}{\ln 64}}$ or $\frac{1}{\frac{\ln 64}{\ln 64}}$

NB: Use your calculator to check eg. 0.240449...

Some candidates may find rational values for B and C. They may combine the denominator of their B or C with (2x + 1) or (2x - 1). Hence: Either $\frac{a}{b(2x-1)} \to k \ln(b(2x-1))$ or

 $\frac{a}{b(2x+1)} \rightarrow k \ln(b(2x+1))$ is okay for M1.

Candidates are not allowed to fluke $-\ln(2x+1) + \ln(2x-1)$ for A1. Hence **cso**. If they do fluke this, however, they can gain the final A1 mark for this part of the question.

To award this M1 mark, the candidate must use the appropriate law(s) of logarithms for their In terms to give a one single logarithmic term. Any error in applying the laws of logarithms would then earn M0.

Note: This is not a dependent method mark.

Candidates can score this mark if there is a complete method for finding the dot product between their vectors in the following cases:

Case 1: their ft
$$\pm \overrightarrow{AB} = \pm (3\mathbf{i} + 4\mathbf{j} + 5\mathbf{k})$$

and $\mathbf{d}_1 = \mathbf{i} + \mathbf{j} + 0\mathbf{k}$
$$\Rightarrow \cos \theta = \pm \left(\frac{3 + 4 + 0}{\sqrt{50} \cdot \sqrt{2}}\right)$$

Case 2:
$$\mathbf{d}_1 = \mathbf{i} + \mathbf{j} + 0\mathbf{k}$$

$$\Rightarrow \cos \theta = \frac{2 + 1 + 0}{\sqrt{2} \cdot \sqrt{6}}$$

Case 3:
$$\mathbf{d}_1 = \mathbf{i} + \mathbf{j} + 0\mathbf{k}$$

and $\mathbf{d}_2 = 2(2\mathbf{i} + \mathbf{j} - 1\mathbf{k})$
$$\Rightarrow \cos \theta = \frac{4 + 2 + 0}{\sqrt{2} \cdot \sqrt{24}}$$

Case 4: their ft
$$\pm \overrightarrow{AB} = \pm (3\mathbf{i} + 4\mathbf{j} + 5\mathbf{k})$$

and $\mathbf{d}_2 = 2\mathbf{i} + \mathbf{j} - \mathbf{k}$
$$\Rightarrow \cos \theta = \pm \left(\frac{6 + 4 - 5}{\sqrt{50} \cdot \sqrt{6}}\right)$$

Case 5: their ft
$$\overrightarrow{OA} = 2\mathbf{i} + 1\mathbf{j} - 1\mathbf{k}$$

and their ft $\overrightarrow{OB} = 5\mathbf{i} + 5\mathbf{j} + 4\mathbf{k}$
$$\Rightarrow \cos \theta = \pm \left(\frac{10 + 5 - 4}{\sqrt{6} \cdot \sqrt{66}}\right)$$

Note: If candidate use cases 2, 3, 4 and 5 they cannot gain the final three marks for this part.

Note: The x and y coordinates must be the right way round.

A candidate who incorrectly differentiates $\tan^2 t$ to give $\frac{dx}{dt} = 2\sec^2 t$ or $\frac{dx}{dt} = \sec^4 t$ is then able to fluke the correct answer in part (b). Such candidates can potentially get: (a) B0M1A1 $\sqrt{}$ (b) B1B1B1M1A0 **cso**. Note: cso means "correct solution only". **Note**: part (a) not fully correct implies candidate can

achieve a maximum of 4 out of 5 marks in part (b).

There are so many ways that a candidate can proceed with part (c). If a candidate produces a correct solution then please award all four marks. If they use a method commensurate with the five ways as detailed on the mark scheme then award the marks appropriately. If you are unsure of how to apply the scheme please escalate your response up to your team leader.
