Mark Scheme for June 2015

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Annotations available in Scoris

Annotation	Meaning
	Benefit of doubt given
	Contradiction
	Incorrect response
	Error carried forward
	Follow through
	Not answered question
	Benefit of doubt not given
	Power of 10 error
	Omission mark
	Rounding error
	Error in number of significant figures
	Correct response
	Arithmetic error
	Wrong physics or equation

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

Annotation	Meaning
/	alternative and acceptable answers for the same marking point
(1)	Separates marking points
reject	Answers which are not worthy of credit
not	Answers which are not worthy of credit
IGNORE	Statements which are irrelevant
ALLOW	Answers that can be accepted
( )	Words which are not essential to gain credit
__	Underlined words must be present in answer to score a mark
ecf	Error carried forward
AW	Alternative wording
ORA	Or reverse argument

The following questions should be annotated with ticks to show where marks have been awarded in the body of the text:

Unless stated otherwise in the mark scheme, accept calculations which round to the mark scheme answer for full marks.

Question	Answer	Marks	Guidance
1 a	$N\ kg^{-1}$	1	
b	$N\ m\ kg^{-1}$	1	
2	EITHER red shift of light/radiation from (distant) galaxies; because galaxies are moving away from each other / have recessional velocity owtte ; OR (uniform) microwave background; which is red-shifted light from early universe;	 1 1 	**ignore** references to expansion of the universe **accept** increase/stretching of wavelength as red shift **accept** galaxies moving away from Earth **accept** cosmological microwaves **accept** radiation for light
3	$\gamma = 42/18 = 2.33$; $v = c\sqrt{1-\frac{1}{\gamma^2}}$ $v = 3.0\times10^8\sqrt{1-\frac{1}{5.44}} = 2.7\times10^8\ ms^{-1}$	1 1 1	 **look for** evidence of correct transposition of data sheet formula **no ecf** for incorrect γ

4 a	initial KE = $\frac{1}{2}50\times200^2 = 1.00\times10^6$ J;
	final KE = $\frac{1}{2}(350+50)\times25^2 = 1.25\times10^5$ J $\approx 1.3x10^5$ J;
	inital momentum: 50 x 200 = 1.0×10^4 kg m s^{-1}, final momentum = (350 + 50) x 25 = 1.0×10^4 kg m s^{-1}
		1
		1
		1
			accept $1x10^6$ J
			look for full working in calculations, not just final value
			accept 400 as final mass if 350 + 50 shown elsewhere
			look for words like initial/before and final/after as labels to calculations of energy or momentum
			accept alphabetic suffixes e.g. **i**, **b**, **f** or **a** to *p* and *E* as labels

	work done deforming the spacecraft;	1	**accept** transfer to heat or thermal energy, **ignore** sound
5 b	C	1	
6 a	-0.3(0); -0.3(0); (0.015 - 0.05×0.45 =) -0.0075 ≈ -0.008	1 1 1	 **allow ecf** if *v* = incorrect Δv **no ecf** for incorrect *v*
6 b	any of the following: • formula has effectively infinite number of steps • not enough steps in the iterative calculation • time interval too long in iterative calculation • each iteration assumes constant speed	1	**accept** step-widths of zero time **ignore** constant acceleration other than zero acceleration

Question	Answer	Marks	Guidance
7	evidence of suitable test e.g. is ρT constant; test applied to all data to 2 s.f. or 3 s.f.; 273 x 1.29 = 352 (350) 283 x 1.25 = 354 (350) 293 x 1.20 = 352 (350) 303 x 1.16 = 351 (350)	1 1	**accept** calculations to more than 3 s.f with a conclusion which mentions that numbers are either not the same to 3 s.f. or the same to 2 s.f. **ignore** any conclusion about the truth of the relationship
8	EITHER measure time for half the sample to decay ($t_{1/2}$),use $\lambda = \frac{\ln 2}{t_{1/2}}$; OR take a known number of atoms, measure activity and use equation given; OR measure gradient (-λ) of a ln(activity)-time graph;	1	**accept** measure half-life from activity-time graph
9	B	1	
	Section A Total	20	

Question	Answer	Marks	Guidance
10 a	$\frac{mv^2}{r} = \frac{GMm}{r^2}$;	1	**accept** $mr\omega^2$ as $\frac{mv^2}{r}$ **not** $\frac{mv^2}{r} = -\frac{GMm}{r^2}$
	evidence of $v = \frac{2\pi r}{T}$;	1	**accept** $\omega = \frac{2\pi}{T}$, $v = r\omega$, $\omega = 2\pi f$
	algebraic manipulation to final formula;	1	**look for** clear steps **ignore** loss of minus sign in final manipulation
b	$V = \frac{4}{3}\pi r^3 = 1.098 \times 10^{21}\ \text{m}^3$;	1	**look for** correct formula or evaluation
	$M = \rho V = 2.7 \times 10^3 \times 1.098 \times 10^{21} = 2.96 \times 10^{24}$ kg	1	**accept** 3.0×10^{24} with full working for [2] **accept** $V = 1.1 \times 10^{21}\ \text{m}^3$ gives 2.97×10^{24} kg for [2]
c i	any two points from: • time for pulse to reach moon = time for pulse to return; • radius of Moon / Earth is comparably negligible; • speed of pulse is constant (throughout the journey) **or** Earth's atmosphere does not affect speed of pulse **or** pulse travels at speed of light in a vacuum ($3 \times 10^8\ \text{m s}^{-1}$) **or** speed of light is constant ;	2	**not** distance for time, **accept** (laser) light for pulse **not just** travels at the speed of light
ii	$r = \frac{3.0 \times 10^8 \times 2.5}{2} = 3.75 \times 10^8$ m;	1	
	$G = \left(\frac{4\pi^2}{3.0 \times 10^{24}}\right)\frac{(3.75 \times 10^8)^3}{(2.4 \times 10^6)^2} = 1.2 \times 10^{-10}\ \text{N m}^2\ \text{kg}^{-2}$;	1	no ecf for incorrect value of r $r = 3.8 \times 10^8$ m gives $G = 1.25 \times 10^{-10}$ or 1.3×10^{-10}
iii	density / mass of Earth incorrect; need to use density of whole Earth / core and mantle are made of different material / density increases with increasing depth;	1 1	**accept** mass / density is too great **accept** orbit may not be circular for [1] **ignore** references to radius of Earth and Moon
	Total	**11**	

Question	Answer	Marks	Guidance
11 a	molecules bounce off the ground; any **two** of the following 1. each bounce transfers momentum to ground 2. force on ground is rate of transfer of momentum 3. pressure is force per unit area	3	**accept** collide with the ground **accept** impulse as momentum transfer / change **ignore** algebraic formulae e.g. $F = \frac{\Delta p}{\Delta t}$, $P = \frac{F}{A}$, $\Delta p = mv - mu$ QWC: first marking point
b i	$NkT = \frac{1}{3}Nm\overline{c^2}$;	1	**not** $kT = \frac{1}{2}m\overline{c^2}$
	T = 293 K;	1	
	$\sqrt{\overline{c^2}} = \sqrt{\frac{3kT}{m}} = 512\,\text{ms}^{-1} \approx 510\ \text{m s}^{-1}$	1	**ecf** T:= 20 K gives 134 ms^{-1} for [2] **allow** $\overline{c^2} = 2.62\times10^5$ for [2]
ii	any **one** of the following assumptions 1. elastic collisions 2. molecules impact surface at right angles to it 3. all molecules moving at rms speed	1	
	evidence of use of $F = PA$ (= 1.0x10^5 x 0.56 = 5.6×10^4 N);	1	
	EITHER $F = \frac{\Delta p}{\Delta t} = \frac{2nm\sqrt{\overline{c^2}}}{1}$ and n = 1.2×10^{27} s^{-1}; (2)	2	
	OR $F = \frac{\Delta p}{\Delta t} = \frac{nm\sqrt{\overline{c^2}}}{1}$ and n = 2.3x10^{27} s^{-1}; (1)		$\sqrt{\overline{c^2}}$ = 500 m s^{-1} gives 2.4x10^{27} s^{-1}
	Total	**10**	

Question	Answer	Marks	Guidance
12 a i	$(R = \frac{V}{I} =) \frac{6.0}{2.7\times10^{-3}} = 2.2(2)\times10^{3}\,\Omega$	1	
ii	EITHER use of half-life = 0.69*RC* = 33±1 s / 53±1 s; OR use of *RC* = 1/*e* drop time = 49±1 s / 69±1 s; OR data from graph, use of $I = I_0 e^{-t/RC}$; *C* = 2.2±0.3×10^{-2} F	1 1	evidence of method [1] correct answer [1]
b i	$\Delta Q = C\Delta V = 470\times10^{-6}\times0.12 = 5.64\times10^{-5}$ C ; $I = \frac{\Delta Q}{\Delta t} = \frac{5.64\times10^{-5}}{60} = 9.4\times10^{-7}\,\text{A} = 0.94\,\mu\text{A}$;	1 1	 **no** ecf on incorrect ΔQ
ii	energy required; for an electron to break free (from an atom) / enter the conduction band / become a free electron / move freely within the insulator;	1 1	 **not** just to get from one plate to the other
iii	use of $\ln I = \ln A - \frac{\varepsilon}{kT}$ to eliminate *A;* ε = 3.9×10^{-20} J;	1 1	look for method which will eliminate *A* [1] corrrect answer for [2]
	Total	**9**	

Question	Answer	Marks	Guidance
13 a	large amplitude (vertical) oscillations; make it dangerous/unpleasant for occupants of lift ;	1 1	**ignore** references to sideways oscillations / swinging **accept** break cables
b i	use of $k = \frac{F}{x}$ or $F = kx$; use of $\frac{F}{A} = E\frac{x}{L}$ to obtain required expression	1 1	**accept** $k = \frac{F}{\Delta L}$
ii	$k = \frac{2.0\times10^{11}\times2.5\times10^{-4}}{300} = 1.67\times10^{5}\ \text{Nm}^{-1}$ $T = (2\pi\sqrt{\frac{m}{k}} = 2\pi\sqrt{\frac{1500+640}{1.67\times10^{5}}}) = 0.711\,\text{s}$ $f = \frac{1}{T} = \frac{1}{0.711} = 1.4\,\text{Hz}$	1 1 1	**no ecf** on incorrect k **allow ecf** if mass is just 1500 kg (1.7 Hz) or 640 kg (2.6 Hz) for [2]
c i	idea that damping requires friction / energy transfer from lift AND slowing down the lift / reducing efficiency of lift	1	
ii	EITHER reducing L (to increase k); raising f_0 (above 2 Hz); OR increasing mass of load / cage; lowering f_0 (below 0.2 Hz); OR decreasing mass of load / cage raising f_0 (above 2 Hz) OR increasing csa of cables (to increase k) raising f_0 (above 2 Hz); OR use a cable material which is stiffer / increased E; raising f_0 (above 2 Hz)	 1 1	any realistic modification [1] which is explained [1] **not** increasing L **not** reducing csa of cables **not** more elastic material QWC against second marking point (organise information clearly)
