**Physics A**

Unit **G484**: The Newtonian World

Advanced GCE

**Mark Scheme for June 2017**

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

© OCR 2017

## Annotations

Annotation	Meaning
	Benefit of doubt given
	Blank Page
	Contradiction
	Incorrect Response
	Error carried forward
	Follow through
	Not answered question
	Benefit of doubt not given
	Power of 10 error
	Omission mark
	Rounding error
	Error in number of significant figures
	Correct Response
	Arithmetic error
	Wrong physics or equation

<b>Annotation</b>	<b>Meaning</b>
/	alternative and acceptable answers for the same marking point
(1)	Separates marking points
reject	Answers which are not worthy of credit
not	Answers which are not worthy of credit
IGNORE	Statements which are irrelevant
ALLOW	Answers that can be accepted
( )	Words which are not essential to gain credit
—	Underlined words must be present in answer to score a mark
ecf	Error carried forward
AW	Alternative wording
ORA	Or reverse argument

**Subject-specific Marking Instructions**

All questions should be annotated with ticks where marks are allocated; One tick per mark.

Question		Answer	Marks	Guidance
1	a	Energy of $\alpha = 5.2 \times 10^6 \times 1.6 \times 10^{-19}$ ( $= 8.32 \times 10^{-13}$ (J)) $E = \frac{1}{2} mv^2$ so $v = \sqrt{\frac{2 \times 8.32 \times 10^{-13}}{6.6 \times 10^{-27}}}$ $= 1.6 \times 10^7 \text{ (m s}^{-1}\text{)}$	<b>C1</b>  <b>A1</b> <b>A0</b>	Must see some working <b>Allow:</b> Max 1 mark for $4 \times 10^{16}$ (not converting to J) or $1.6 \times 10^4$ (not converting MeV to eV) $5.1 \times 10^5$ (using keV rather than MeV)
	b	Any <b>three</b> from <ul style="list-style-type: none"> <li>• Total <b>momentum</b> of system / particles is conserved (as there are no external forces) / Increase in momentum of Sr nucleus equals decrease in momentum of alpha-particle</li> <li>• (Electrostatic) force (of repulsion) acts on (Sr) nucleus</li> <li>• (By Newton's 2<sup>nd</sup> law Sr) nucleus accelerates (away from alpha particle)</li> <li>• Sr acceleration increases and then decreases (to zero)</li> <li>• Force on Sr nucleus <math>\propto</math> rate of change of momentum of alpha particle. (AW)</li> </ul>	<b>B1</b> $\times$ 3	 <b>momentum</b> / <b>accelerate(s)</b> / <b>acceleration</b> must be spelled correctly to score corresponding mark
	c	(Momentum is conserved) $6.6 \times 10^{-27} \times 1.6 \times 10^7 = 1.3 \times 10^{-25} \times V$  $V = 8.1 \times 10^5 \text{ (ms}^{-1}\text{)}$	<b>C1</b>  <b>A1</b>	<b>Possible ECF from (a)</b> <b>Allow</b> full marks for use of $2 \times 10^7$ for speed of alpha particle giving $V = 1.0 \times 10^6 \text{ (m s}^{-1}\text{)}$
	d	$\Delta(mv) = 2 \times 6.6 \times 10^{-27} \times 1.6 \times 10^7 (= 2.11 \times 10^{-19})$ $F\Delta t = 4.8 \times \Delta t = 2.11 \times 10^{-19}$  $\Delta t = 4.4 \times 10^{-20} \text{ (s)}$	<b>C1</b>  <b>A1</b>	<b>Possible ECF from (a)</b> <b>Allow</b> full marks for use of $2 \times 10^7$ for speed of alpha particle giving $\Delta t = 5.5 \times 10^{-20} \text{ (s)}$
<b>Total</b>			<b>9</b>	

2	a	(Fig. 2.1 shows) $a$ and $x$ are in opposite directions	B1	Allow $a$ is towards the equilibrium position
		(Fig. 2.2 shows that magnitude of) $a$ is proportional to $x$ because graph is a straight line <u>through the origin</u>	B1	Reason must be given
	b	$\text{gradient} = \omega^2 = \frac{40}{50 \times 10^{-3}} = 800$ $T = \frac{2\pi}{\omega} = \frac{2\pi}{\sqrt{800}} = 0.22 \text{ (s)}$	C1	Allow : use of equation and one point from graph
	c	$[k] = \left[ \frac{ma}{x} \right] = \frac{\text{kg} \times \text{m s}^{-2}}{\text{m}}$ $[k] = \text{kg s}^{-2}$	C1	Allow: C1 mark for any subject
			A1	
		ii $\frac{k}{m}$ is gradient $\frac{k}{m} = 800 \text{ (s}^{-2}\text{)}$	A1	Possible ECF from (b)  Ignore sign
	d	<ul style="list-style-type: none"> <li>The period / frequency of the oscillations would remain the same</li> <li>Successive <b>amplitude(s)</b> would decrease in magnitude</li> <li>energy is dissipated as heat / thermal energy / work is done against friction (AW)</li> </ul>	B1	✎ <b>amplitude</b> must be spelled correctly to score this mark <b>Allow:</b> 1 mark for bald statement that motion would be 'damped harmonic' or suitable sketch.
			B1	
			B1	

2	e	i	<ul style="list-style-type: none"> <li>• <b>C</b> continues to move in a straight line as the tube rotates ( by N1<sup>st</sup> Law) stretching the spring.</li> <li>• Spring exerts a force on <b>C</b> which provides the centripetal acceleration ( by Newton's 2<sup>nd</sup> law) to rotate <b>C</b> ( in a circle of appropriate radius).</li> </ul>	B1 B1	No credit for bald statement of laws. They must be applied to the problem.
		ii	<p>Any <b>four</b> from</p> <ul style="list-style-type: none"> <li>• Measure natural length of spring <b>OR</b> Measure mass of <b>C</b> with balance/scale(s).</li> <li>• Rotate at <u>constant</u> speed and video apparatus and ruler</li> <li>• Measure <math>R</math> from video</li> <li>• Find period <math>T</math> from video and speed <math>v</math> from <math>2\pi R/T</math></li> <li>• Measure extension from video <b>OR</b> calculate extension, <math>x</math>, from <math>R</math> and natural length</li> <li>• Use spring constant and <math>F = kx</math> /Hooke's law <b>OR</b> substitute <math>M, v, R</math> into <math>F = Mv^2/R</math> to find force <math>F</math></li> </ul>	B1 x 4	
		iii1	$FR / Nm$	B1	Must have appropriate unit (ignore any prefix)
		iii2	$m = FR / v^2$ [any subject] mass is gradient of graph	C1 A1	Possible ecf from (iii)1
			<b>Total</b>	<b>19</b>	

3	a	$g = \frac{GM}{R^2}$ $\frac{g_{\text{Mars}}}{g_{\text{Earth}}} = \left( \frac{GM_{\text{Mars}}}{R_{\text{Mars}}^2} \right) \left( \frac{R_{\text{Earth}}^2}{GM_{\text{Earth}}} \right) = \left( \frac{1}{(3400)^2} \right) \left( \frac{(6400)^2}{9.3} \right)$ $g_{\text{Mars}} = 0.38 \times 9.81$ $g_{\text{Mars}} = 3.74 \approx 3.7 \text{ (Nkg}^{-1}\text{)}$	<p><b>C1</b></p> <p><b>A1</b></p>	<p><b>Allow:</b> use of recalled mass of Earth (<math>\sim 6 \times 10^{24}</math> kg) and G from data tables <b>OR</b> calculation of mass of Earth from <math>g = 9.81 \text{ m s}^{-1}</math></p> <p><b>C1</b> mark is for substitution into appropriate formula <b>OR</b> mass of Mars = <math>6.45 \times 10^{23}</math> (kg)</p> <p>Possible <b>FT</b> from their mass of Mars</p>
	b	<p><b>i</b></p> <ul style="list-style-type: none"> <li>• Vertical acceleration on Mars is less than on Earth (AW)</li> <li>• time of fall on Mars is greater than time of fall on Earth (AW)</li> <li>• horizontal distance travelled will be greater on Mars</li> </ul>	<p><b>B1</b></p> <p><b>B1</b></p> <p><b>A0</b></p>	
		<p><b>ii</b></p> <ul style="list-style-type: none"> <li>• Value of max height will be too small</li> <li>• <math>g/a</math> will reduce as height increases / <math>g \propto 1/r^2</math> / SUVAT equations only apply if <math>a</math> is constant</li> </ul>	<p><b>B1</b></p> <p><b>B1</b></p>	<p><b>Allow</b> 1 out of 2 marks for '<u>air</u> resistance will reduce the height'</p>

	<b>c</b>	<p><b>i1</b></p> <ul style="list-style-type: none"> <li>orbit must be over equator / equatorial</li> <li>period must be one Martian day / <math>8.9 \times 10^4</math> s</li> <li>direction of rotation must be the same as that of Mars / must travel in orbit parallel to a point on surface of Mars</li> </ul>	<p><b>B1</b></p> <p><b>B1</b></p> <p><b>B1</b></p>	<p><b>Allow</b> : same <u>angular</u> speed as Mars</p>
		<p><b>i2</b></p> $GM_{\text{Mars}} = gR^2 = 3.74 \times (3400 \times 10^3)^2 \quad (= 4.3 \times 10^{13})$ $T^2 = \frac{4\pi^2}{GM_{\text{Mars}}} r^3$ $r = \sqrt[3]{\frac{4.3 \times 10^{13} \times (8.9 \times 10^4)^2}{4\pi^2}}$ $r = 2.1 \times 10^7 \quad (\text{m})$	<p><b>C1</b></p> <p><b>A1</b></p>	<p><b>Possible ECF</b> for mass of Mars from (a)</p> <p><b>Allow: C1</b> mark for substitution of values into correct equation written with any subject.</p> $\text{Allow: } r = \sqrt[3]{\frac{6.67 \times 10^{-11} \times 6.45 \times 10^{23} (8.9 \times 10^4)^2}{4\pi^2}}$ $r = 2.1 \times 10^7 \quad (\text{m})$
		<p><b>ii</b></p> $T = \sqrt{\frac{4\pi^2 r^3}{GM_{\text{Mars}}}} = \sqrt{\frac{4\pi^2 \times ((3400 + 9000) \times 10^3)^3}{4.3 \times 10^{13}}}$ $T = 4.2 \times 10^4 \quad (\text{s})$ $\text{number of images} = \frac{4.2 \times 10^4}{25} = 1700$	<p><b>C1</b></p> <p><b>C1</b></p> <p><b>A1</b></p>	<p><b>Possible ECF</b> from their <math>GM_{\text{Mars}}</math> in c(i)2 or mass of Mars from (a)</p> <p><b>Allow</b> : Alternative method using <math>T^2 \propto r^3</math> eg</p> $T = \left( \sqrt{\frac{(12400 \times 10^3)^3}{(2.1 \times 10^7)^3}} \right) \times 8.9 \times 10^4 = 4.2 \times 10^4 \quad (\text{s})$ <p><b>Allow</b>: 2 out of 3 marks for <math>T = 2.6 \times 10^4</math> (s) leading to approximately 1034 images [uses 9000 km as radius of orbit]</p> <p><b>Possible FT</b> from their value of <math>T</math></p>
