AS exams 2009 onwards
A2 exams 2010 onwards

Unit 5: **Approved specimen mark scheme**

Version 1.1

General Certificate of Education

Physics 2456

Specification B Physics In Context

PHYB5 Energy Under the Microscope

Mark Scheme

Specimen Draft

The specimen assessment materials are provided to give centres a reasonable idea of the general shape and character of the planned question papers and mark schemes in advance of the first operational exams.

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: www.aqa.org.uk

PHYB5: Energy Under the Microscope

Question 1			
(a)	(i)	$PV = NkT$ ✓ $223 \times 10^5 \text{ Pa}$ ✓	AO1 AO2
	(ii)	$pV = \text{const}$ or repeat calculation from (i) ✓ $3.5 \times 10^{-3} \text{ m}^3$ ✓	AO1 AO2
	(iii)	kinetic energy = $3/2 kT$ ✓ $5.9(0) \times 10^{-21} \text{ J}$ ✓	AO1 AO2
(b)	(i)	volume increase ✓ time between collisions increases ✓ speed constant as temp constant ✓ rate of change of momentum decreases ✓	AO1 AO1 AO2 AO2
	(ii)	volume smaller in cylinder ✓ molecules occupy significantly greater proportion of the volume ✓ molecules closer so intermolecular forces greater ✓	AO1 AO2 AO2
		} max 3	
(c)		internal energy stays the same ✓ gas does work in expanding so W is negative ✓ gas must be heated to make U positive ✓ U and W equal and opposite ✓	AO2 AO2 AO2 AO2
			Total
			16

Question 2			
(a)	number correct for alpha ✓ number correct for beta ✓ alpha decay first goes via Tl ✓ numbers correct for Tl (208, 81) ✓ beta decay first goes via Po ✓ numbers correct for Po (212, 84) ✓	AO1 AO1 AO2 AO2 AO2 AO2	6
(b)	(i) use of GM tube + counter/rate-meter ✓ measurement of count rate ✓ at range of distances + suitable ruler or tape measure ✓ specifies suitable range ✓ determines background & corrects ✓ safety precaution given ✓ graph of count rate or corrected count rate against $1/d^2$ ✓ <div style="float: right; margin-left: 20px;"> } max 6 </div> (ii) gamma not absorbed ✓ spreads uniformly from a point source/spherically symmetrically ✓ area over which it spreads is proportional to radius squared ✓ alpha and beta are absorbed in addition to spreading out ✓ <div style="float: right; margin-left: 20px;"> } max 2 </div>	AO3 AO3 AO3 AO3 AO3 AO3 AO3 AO1 AO1 AO1 AO2	9
		Total	15

Question 3			
(a)	<p>clear attempt to find mass defect ✓</p> <p>0.1860 u (condone 3 s.f.) ✓</p> <p>converts their answer to kg (3.09×10^{-28}) ✓</p> <p>uses $\Delta E = \Delta m c^2$ ✓</p> <p>2.78×10^{-11} J ✓</p>	<p>AO2</p> <p>AO2</p> <p>AO2</p> <p>AO1</p> <p>AO2</p>	5
(b)	<p>(i) slow neutrons down ✓</p> <p>slow neutrons more likely to produce fission ✓</p> <p>(ii) water ✓</p> <p>(iii) small atomic mass ✓</p> <p>not a strong neutron absorber ✓</p>	<p>AO1</p> <p>AO2</p> <p>AO1</p> <p>AO2</p> <p>AO2</p>	5
(c)	<p>(i) start up and close down – control rods ✓</p> <p>power control in operation – material injected into coolant ✓</p> <p>(ii) boron rods or boric acid ✓</p> <p>(iii) strong neutron absorber ✓</p>	<p>AO1</p> <p>AO2</p> <p>AO1</p> <p>AO2</p>	4

(d)	The marking scheme for this part of the question includes an overall assessment for the Quality of Written Communication (QWC). There are no discrete marks for the assessment of QWC but the candidates' QWC in this answer will be one of the criteria used to assign a level and award the marks for this part of the question.		
Level	Descriptor an answer will be expected to meet most of the criteria in the level descriptor		Mark range
Good 3	<ul style="list-style-type: none"> - claims supported by an appropriate range of evidence - good use of information or ideas about physics, going beyond those given in the question - argument well structured with minimal repetition or irrelevant points - accurate and clear expression of ideas with only minor errors of grammar, punctuation and spelling 		5-6
Modest 2	<ul style="list-style-type: none"> - claims partially supported by evidence - good use of information or ideas about physics given in the question but limited beyond this - the argument shows some attempt at structure - the ideas are expressed with reasonable clarity but with a few errors of grammar, punctuation and spelling 		3-4
Limited 1	<ul style="list-style-type: none"> - valid points but not clearly linked to an argument structure - limited use of information or ideas about physics - unstructured - errors in spelling, punctuation and grammar or lack of fluency 		1-2
0	- incorrect, inappropriate or no response		0
	examples of the sort of information or ideas that might be used to support an argument:		
	does not contribute to greenhouse gases	AO3	
	doesn't use up oil reserves	AO3	
	danger of nuclear accident	AO3	
	legacy of radioactive waste	AO3	
	risk of spread of nuclear technology or materials	AO3	
(e)	fission has long lasting very harmful fission products ✓	AO1	2
	fusion fuel safely and readily available without dangerous reprocessing ✓	AO2	
		Total	22

Question 4			
(a)	(i)	charge stored per unit volt or equation with terms defined ✓	AO1
	(ii)	0.108 C or 0.11 C c.a.o. ✓	AO2
(b)	(i)	1.7 s ✓	AO2
	(ii)	correct curvature ✓	AO1
		intercept on V axis, asymptotic to t axis ✓	AO2
		initial voltage, time constant and V after RC seconds shown ✓	AO2
(c)		initially no pd across C so rate of charging is high ✓	AO1
		Pd across C increases as the capacitor charges ✓	AO1
		rate of charging reduces ✓	AO1
			Total
			9

Question 5			
(a)	(i)	ions experience a force due to both the magnetic and electric fields ✓	AO1
		fields are in opposite directions ✓	AO1
		equal and opposite for ions of only 1 speed ✓	AO2
	(ii)	$v = E/B$ and $E = V/d$ ✓	AO1
		data substituted and evaluated correctly ✓	AO2
	(iii)	$Bqv = mv^2/r$ ✓	AO1
		correct substitution with or without the doubling to find d ✓	AO2
		0.29 m ✓	AO2
(b)	(i)	a.c. supply connected to electrodes ✓	AO1
		electrons accelerated in the electric fields between consecutive electrodes ✓	AO1
		electrons are going faster each time so need more distance between ✓	AO2
		electrodes to be phase with the alternating supply ✓	AO2
	(ii)	$m = \frac{m_o}{\sqrt{1 - \frac{v^2}{c^2}}} \checkmark$	AO1
		correct substitution of data ✓	AO2
		$2.5(4) \times 10^{30}$ kg ✓	AO2
			Total
			15

Question 6			
(a)	(i)	use of $\lambda = (\ln 2)/t_{1/2}$ ✓ shows that years have been converted to seconds ✓	AO1 AO2
	(ii)	use of 1 mole 238 g ✓ $4.0(4) \times 10^{20}$ ✓	AO2 AO2
	(iii)	states $A = \lambda N$ ✓ multiplies (i) by (ii) ✓	AO1 AO2
(b)	(i)	multiplies 1.0×10^{11} by 5600×10^3 ✓ 0.090 J ✓	AO2 AO2
	(ii)	$7.5 \times 10^{-4}/0.090$ ✓ 0.83% ✓	AO2 AO2
(c)		use of any $e^{-\lambda t}$ relationship ✓ uses 6/7.5 ✓ 5.0×10^9 s ✓	AO1 AO2 AO2
(d)		uses $E = mc\Delta\theta$ ✓ 9.1 ✓ K or °C ✓	AO1 AO2 AO1
(e)	(i)	chooses beta emitter so there is no risk of neutron production ✓ rejects strontium as too energetic ✓ selects Nickel which has an appropriate half life ✓	AO3 AO3 AO3
	(ii)	may be alpha or gamma emitters in the decay chain ✓	AO3
(f)		compares risk of death with and without pacemaker ✓ mentions quality of life ✓ clinical trials/prior testing to establish reliability ✓	AO3 AO3 AO3
