

Mark Scheme (Results) January 2011

GCE

GCE Chemistry (6CH05/01)

Edexcel Limited. Registered in England and Wales No. 4496750 Registered Office: One90 High Holborn, London WC1V 7BH

Edexcel is one of the leading examining and awarding bodies in the UK and throughout the world. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers.

Through a network of UK and overseas offices, Edexcel's centres receive the support they need to help them deliver their education and training programmes to learners.

For further information, please call our GCE line on 0844 576 0025, our GCSE team on 0844 576 0027, or visit our website at www.edexcel.com.

If you have any subject specific questions about the content of this Mark Scheme that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Ask The Expert can be accessed online at the following link: http://www.edexcel.com/Aboutus/contact-us/

Alternatively, you can speak directly to a subject specialist at Edexcel on our dedicated Science telephone line: 0844 576 0037

TOTAL FOR SECTION A = 20 MARKS

Section **B**

Question Number	Acceptable Answers	Reject	Mark
15 (a) (i)	Electrophilic substitution (any order)		1

Question Number	Acceptable Answers	Reject	Mark
15 (a) (ii)	AlCl ₃ + CH ₃ CH(Br)CH ₂ CH ₃ \rightarrow AlCl ₃ Br ⁻ + CH ₃ C ⁺ HCH ₂ CH ₃ ALLOW CH ₃ CH(Br)CH ₂ CH ₃ \rightarrow Br ⁻ + CH ₃ C ⁺ HCH ₂ CH ₃ Ignore position of the + for this mark Ignore curly arrows in this equation (1) $ \begin{array}{c} \downarrow \downarrow$		4
	Structure of intermediate must include positive sign(1)Electron pair from C-H bond reforms delocalized ring(1)		

Question Number	Acceptable Answers	Reject	Mark
15 (b)	AdvantageGraphite catalyst easier to remove / separate / can be filtered off (from reaction mixture) / graphite can be re-used(1)	Just graphite is a heterogeneous catalyst	2
	Justification AlCl ₃ is soluble or graphite is insoluble /different state / different phase		
	OR		
	Graphite can be re-used (1)		
	Mark independently		

Question Number	Acceptable Answers		Reject	Mark
15 (c) (i)	(Conc) nitric acid	(1)		2
	(Conc) sulfuric acid	(1)		
	penalise dilute once only			

Question Number	Acceptable Answers		Reject	Mark
15 (c) (ii)	Greater electron density in ring / ring is activated / more susceptible to electrophilic attack	(1)	Just more susceptible to attack	2
	Due to electron releasing / donating methyl groups	(1)		

Question Number	Acceptable Answers	Reject	Mark
15 (c) (iii)	Reduction ALLOW redox	Hydrogenation	1

Question Number	Acceptable Answers	Reject	Mark
15 (c) (iv)	NaNO ₂ / sodium nitrite / sodium nitrate(III) & HCl (any strong acid) (1) Temp 0-10°C / less than 10°C / any quoted temperature between 0 -10°C / in ice bath (1) $C_6H_3(CH_3)_2 NH_2 + HNO_2 + HCl \rightarrow C_6H_3(CH_3)_2N_2^+Cl^- + 2H_2O$ (1) Add phenol dissolved in alkali (1) $(C_6H_3(CH_3)_2N_2^+Cl^- + C_6H_5OH) \rightarrow C_6H_3(CH_3)_2N_2C_6H_4OH + (HCl)$ (1) Mark given for correct organic product Allow correct organic product shown as -O ⁻ instead of -OH Mark independently	HNO3	5
	···		1

Question Number	Acceptable Answers	Reject	Mark
16 (a) (i)	$(COOH)_2 \rightarrow 2CO_2 + 2H^+ + 2e^-$ (1)		2
	$MnO_4^- + 8H^+ + 5e^- \rightarrow Mn^{2+} + 4H_2O$ (1)		

Question Number	Acceptable Answers	Reject	Mark
16 (a) (ii)	$5(\text{COOH})_2 + 2\text{MnO}_4^- + 6\text{H}^+ \rightarrow 10\text{CO}_2 + 2\text{Mn}^{2+} + 8\text{H}_2\text{O}$ ALLOW multiples	Equation with electrons left in	1
	ALLOW $5(COOH)_2 + 2MnO_4^- + 16H^+ \rightarrow 10CO_2 + 2Mn^{2+} + 8H_2O + 10H^+$		
	Ignore state symbols even if incorrect		

Question Number	Acceptable Answers	Reject	Mark
16 (a) (iii)	Moles of MnO ₄ ⁻ = 11.30/1000 x 0.010 = 1.13 x 10 ⁻⁴ (mol) (1)	TE for 5th mark if % is greater than 100%	5
	Moles of $(COOH)_2$ in 10 cm ³ = 1.13 x 10 ⁻⁴ x 5/2 = 2.825 x 10 ⁻⁴ (mol) (1)		
	Moles of $(COOH)_2$ in whole sample = 2.825 x 10^{-4} x 50 = 0.01412(5) (mol) (1)	Rounding errors once in first 4 marks	
	Mass of acid = 0.01412(5)x 90 = 1.27 g (1)	III TII SC 4 IIIdi KS	
	% in leaves = 1.27/250 x 100 = 0.51 (%) (1)	Final answers not guoted to 2 dp	
	If ratio 5 : 2 is not used, maximum (4)		
	e.g. if ratio 2:5 is used then percentage in leaves = 0.08%		

Question Number	Acceptable Answers		Reject	Mark
16 (a) (iv)	± 0.05 cm ³	(1)		2
	[(0.05 x 2) / 11.3] x 100 = 0.88%	(1)		
	ALLOW ±0.025 cm ³	(1)		
	[(0.025 x 2) / 11.3] x 100 = 0.44%	(1)		
	ALLOW TE for second mark			

Question Number	Acceptable Answers	Reject	Mark
16 (a) (v)	Any two from:		2
	Only one titration carried out (1)	Errors in technique e.g. transfer errors	
	Leaves may contain other substances that MnO ₄ ⁻ could oxidize/ react with (1)	e.g. transfer errors	
	Not all ethanedioic acid extracted from leaves (1)		
	ALLOW temperature too low / below 60°C (1)		
	Different amounts of acid from different leaves (1)		

Question Number	Acceptable Answers	Reject	Mark
16 (a) (vi)	(Wearing gloves suggested as) ethanedioic acid is toxic / harmful OR	References to weak acid	2
	rhubarb leaves are toxic /harmful (1)	Rhubarb is toxic	
	(Unnecessary because) it is (very) dilute / present in small amounts (1)		
	ALLOW because is not absorbed through the skin		
	Second mark is independent of the first		

Question Number	Acceptable Answers	Reject	Mark
16 (a) (vii)	(Cloudiness due to) MnO ₂ (solid /precipitate) (1) Ignore colour of precipitate		2
	EITHER Suitable use of E^{θ} (+0.34V)		
	OR MnO₄ ⁻ ions are a strong enough oxidizing agent to oxidize Cl ⁻ ions (1)		

Question Number	Acceptable Answers	Reject	Mark
16 (b) (i)	$(1s^2)2s^22p^63s^23p^63d^5$ (4s ⁰)	4s ² 3d ³	1

Question Number	Acceptable Answers	Reject	Mark
16 (b) (ii)	Octahedral		1

Question Number	Acceptable Answers	Reject	Mark
17 (a) (i)	(Ligands cause) d orbitals / sub-shell / sub level to split (1)	Description of flame test	3
	Some frequencies of light (energy) are absorbed (1)		
	To promote electrons (within d level / d \rightarrow d transitions) (1)		
	ALLOW as alternative for second mark		
	Remaining light is transmitted / reflected (resulting in the colour seen)		
	Mark independently		

Question Number	Acceptable Answers	Reject	Mark
17 (a) (ii)	Concentrated HCl / HCl / HCl (aq) (1) Ligand exchange / replacement / substitution (1)	Dilute HCl	2
	Mark independently		

Question Number	Acceptable Answers	Reject	Mark
17 (b) (i)	$\begin{split} & [Cr(H_2O)_6]^{3^+} + H_2O \Rightarrow [Cr(H_2O)_5(OH)]^{2^+} + H_3O^+ \\ & (1) \\ & (1) \\ & (1) \\ & \\ & \\ & \\ & \\ & \\ & \\ & \\ & \\ & \\ $		2

Question Number	Acceptable Answers	Reject	Mark
17 (b) (ii)	The concentration of oxonium / hydrogen ions is less in the $[Cu(H_2O)_6]^{2^+}$ / fewer hydrogen ions produced or reverse argument based on Cr ion (1) ALLOW $[Cr(H_2O)_6]^{3^+}$ / chromium ion deprotonates more easily if H_3O^+ shown in equation in (b) (i)	Just chromium complex more acidic The concentration of oxonium / hydrogen ions is greater in the $[Cu(H_2O)_6]^{2+}$ / more hydrogen ions produced	2
	Because copper ion is 2+ whilst the chromium ion is 3+ / charge on copper ion is less than charge on Cr ion / less charge density on 2+ ions / Cr (3+) draws more electron density from the O-H bond (1)	Ligand exchange	

Question Number	Acceptable Answers	Reject	Mark
17 (c)	$Cr(OH)_3 / Cr(H_2O)_3(OH)_3$		1

Question Number	Acceptable Answers	Reject	Mark
17 (d)	NaOH is a (strong) base / alkali (1) Cr(H2O)3(OH)3 loses (three) protons / undergoes further deprotonation 0R OR Cr(OH)3 is amphoteric (so reacts with strong bases) (1)	Chromium is amphoteric	3
	To reverse reaction 4 add (sulfuric) acid / H^+ / HCl (1)		

Question Number	Acceptable Answers	Reject	Mark
17 (e)	$[Cr(NH_3)_6]^{3^+} + (edta)^{4^-} \rightarrow [Cr(edta)]^- + 6NH_3 (1)$ Ignore missing brackets Ignore state symbols even if wrong During the reaction number of particles increases (2 to 7) / more moles of product than reactants AND entropy (of system) increases (1)	Entropy increases because a gas is produced only Just more products than reactants	2

TOTAL FOR SECTION B = 50 MARKS

Section C

Question	Acceptable Answers		Reject	Mark
Number				
18 (a) (i)	Mass of C in $CO_2 = 12/44 \times 0.88 = 0.24 \text{ g}$ Mass of H in $H_2O = 2/18 \times 0.216 = 0.024\text{ g}$	(1)		4
	So mass of oxygen = 0.328 - (0.24 + 0.024) = 0.064 g	(1)		
	Moles of C = 0.24/12 = 0.02 Moles of H = 0.024/1 = 0.024 Moles of O = 0.064/16 = 0.004	(1)		
	Ratio = simplest ratio = 5:6:1 so $C_{10}H_{12}O_2$	(1)		
	OR Moles of CO ₂ 0.88/44 = 0.02 Moles of H ₂ O 0.216/18 = 0.012	(1)		
	Moles of H = 0.024 therefore ratio of C:H is 5			
	Can gain remaining two marks if they continu calculation as above	(1) ie		
	OR $C_{10}H_{12}O_2 = 164$	(1)		
	Percentage carbon is 120/164 = 73.2% Percentage hydrogen is 7.3% Percentage oxygen is 19.5%	(1)		
	Mass of carbon = 73.2 x 0.328/100 = 0.24 Mass of hydrogen = 7.3 x 0.328/100 = 0.024 Mass of oxygen = 19.5 x 0.328/100 = 0.064	(1)		
	Mass of carbon in CO_2 is $12/44 \ge 0.88 = 0.24$ Mass of hydrogen in H_2O is $1/9 \ge 0.216 = 0.02$	4 (1)		
	OR Mass of C in CO ₂ = 12/44 x 0.88 = 0.24 g Mass of H in H ₂ O = 2/18 x 0.216 = 0.024g	(1)		
	So mass of oxygen = 0.328 - (0.24 + 0.024) = 0.064 g	(1)		
	Percentage of C = $0.24/0.328 = 73.2\%$ Percentage of H = $0.024/0.328 = 7.3\%$ Percentage of O = $0.064/0.328 = 19.5\%$	(1)		
	C ₁₀ H ₁₂ O ₂ = 164 Percentage carbon is 120/164 = 73.2% Percentage hydrogen is 12/164 = 7.3%			
	Percentage oxygen is 32/164 = 19.5%	(1)		

Question Number	Acceptable Answers	Reject	Mark
18 (a) (ii)	Add (small amount of) Br2 / bromine(1)(Br2 turns from orange / yellow / red-brown to)colourless / decolourised(1)	clear	2
	ORAdd (small amount of) acidified KMnO4(aq)KMnO4(aq) turns from purple/pink to colourless / brownImage: transform of the purple of the pur		
	ORAdd (small amount of) alkaline KMnO4(aq)(1)KMnO4(aq) turns from purple/pink to green(1)		

Question Number	Acceptable Answers	Reject	Mark
18 (a) (iii)	(Heat under) reflux		1
	OR		
	microwave (in sealed container)		

Question Number	Acceptable Answers	Reject	Mark
18 (a) (iv)	CH ₃ COCl / CH ₃ COO(COCH ₃) / ethanoyl chloride / ethanoic anhydride ALLOW CH ₃ COOH / ethanoic acid and H ₂ SO ₄ / sulfuric acid / HCl / hydrochloric acid	Correct answer plus AlCl ₃ Acyl chloride	1

Question Number	Acceptable Answers		Reject	Mark
18 (b) (i)	steam source and r.b /pear-shaped flask (a clove buds) OR r.b /pear-shaped flask being heated and containing water (and clove buds) Condenser with water jacket, in correct po and direction of water flow Collection vessel -1 if apparatus does not work e.g. sealed -1 for no joints or leaky joint	(1)	Conical flask if being heated with the clove buds in	3

Question Number	Acceptable Answers	Reject	Mark
18 (b) (ii)	Mix organic solvent and oil-water mixture in a separating funnel then separate(1)Distil / rotary evaporate (to separate clove oil from organic solvent)(1)Add (anhydrous)CaCl2 / (anhydrous) MgSO4 / (anhydrous) Na2SO4 / silica gel / calcium oxide to 	(Anhydrous) CuSO₄ NaOH, sodium carbonate, sodium hydrogencarbonate, calcium carbonate	3
	Add (saturated solution) of NaCl / sodium salt (1)		
	Separate in a separating funnel (1)		
	Add named drying agent to clove oil, (then filter / decant) (1)		

Question Number	Acceptable Answers	Reject	Mark
18 (c)	Choice with justification (1) e.g. 'yes it's reasonable as clove oil may be in use at harmful /toxic levels so we need to identify what that level is'	Yes because it's toxic	1
	'no as clove oil has been in use for many years in many ways so tests on animals not necessary to confirm it's safe to use at current levels' / no, as humans would have to consume large amounts	No, because of objections to animal testing in general	

Question Number	Acceptable Answers	Reject	Mark
18 (d)*	4 clear justified comparisons - 1 mark each ScCO ₂		5
	oil obtained seems purer (as colour closely matches that of eugenol)	produces pale yellow oil Just no organic solvent Only two hours / shorter time than other methods Just higher percentage yield	
	requires no further purification, (others use solvent extraction)		
	greater yield per hour		
	yield 15.3g per 100g of buds		
	no organic solvent (because it is chlorinated) and so environmental problems / harmful / damage ozone layer	Just no organic solvent	
	requires high pressure so likely to be expensive / requires specialist equipment		
	Steam distillation steam distillation can be done using standard lab equipment /does not require high pressures		
	yield only 6.1g / 6.2g per 100g of buds	Higher yield than soxhlet	
	Steam gives the least yield per hour		
	Soxhlet produces greater yield of oil but has a smaller percentage of eugenol /eugenol ethanoate		
	yield 16.8g per 100g of buds		
	(takes longer) but does not require high pressures		
	uses organic solvent (because it is chlorinated) and so environmental problems / harmful / damage ozone layer		
	Oil obtained seems least pure (4)		
	Synthetic route has several steps, each with a low yield clove buds are renewable but materials in synthesis are not / materials in synthesis likely to		
	be obtained from oil (1)	Cost of chemicals Yield is 35 %	

TOTAL FOR SECTION C = 20 MARKS
