

G494 Rise and Fall of the Clockwork Universe

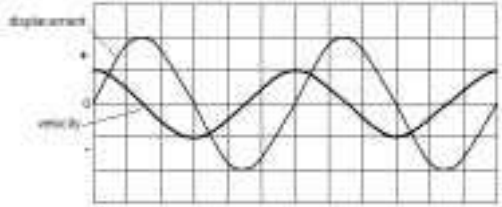

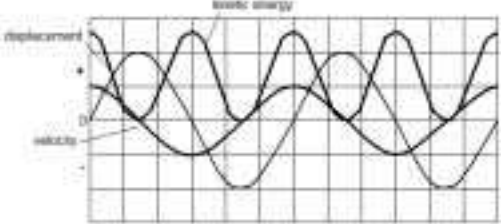

| Question | | Expected Answers | Marks | Additional Guidance |
|----------|-----|---|--------|---|
| 1 | (a) | J kg^{-1} | 1 | |
| | (b) | N s | 1 | look for capital n, not lower case |
| 2 | (a) | $\lambda = 1.3 \times 10^{-5}$ | 1 | accept 1.28×10^{-5} but not 1.2×10^{-5} (incorrect rounding) |
| | (b) | the probability per second; of a decay / change of a (single) nucleus/atom | 1 1 | accept chance per second / unit time look for mention of nucleus or atom, but not particle / sodium-24 ... accept alternative answer: fraction of nuclei / atoms for [1] decaying per second for [1] |
| 3 | (a) | $\Delta p = (0.15 \times 5) \times 700 = 525 \text{ kg m s}^{-1}$ | 1 | accept correct reverse calculation: e.g. 500 kg m s^{-1} gives 4.8 s for [1] |
| | (b) | $p_{\text{initial}} = 120 \times 60 = +720 \text{ Ns}$ $p_{\text{final}} = +720 - 525 = 195 \text{ Ns}$ $v_{\text{final}} = +195 / 120 = 1.6(3) \text{ m s}^{-1}$ | 2 | evidence of correct calculation of initial momentum (\pm) for [1] ecf: 500 kg m s^{-1} gives $1.8(3) \text{ m s}^{-1}$ for [2] ignore sign of final answer alternative method for [2]: change of velocity = $525/120 = 4.38 \text{ m s}^{-1}$ final velocity = $6.0 - 4.38 = 1.6(3) \text{ m s}^{-1}$ allow [1] for correct change of velocity allow final mass of astronaut = 119.25 kg to give $1.6(4) \text{ m s}^{-1}$ |
| 4 | (a) | $\gamma = 1.34$ | 1 | look for more than just 1.3 |
| | (b) | $1.1 \times 10^{-6} \text{ s}$ | 1 | |
| 5 | (a) | minus (-); $4.9 \times 10^9 \text{ J}$ | 1 1 | look for minus sign with their final answer (from whatever formula) |
| | (b) | A | 1 | |
| 6 | (a) | A | 1 | |
| | (b) | C | 1 | remember All Able Candidates |

| Question | Expected Answers | Marks | Additional Guidance | | | | | |
|------------------------|---|----------------------|---|--|--|---|---------------------|--|
| 7 | <p>25 mm peak at 4 Hz; tends towards zero above 4 Hz; 5 mm at 0 Hz;</p>  | <p>1 1 1</p> | <p>look for maximum at 4 Hz, sharpness of peak is not important must be at or below 2.5 mm at 16 Hz (by eye) must be at 5 mm at 0 Hz (by eye)</p> | | | | | |
| 8 | <p>Microwave radiation from the universe can be detected in all directions. The red-shift of lines in a galaxy's spectrum is proportional to its distance from our galaxy.</p> <div style="text-align: center;"> <table border="1" data-bbox="645 836 705 1161"> <tr><td style="height: 20px;"></td></tr> <tr><td style="text-align: center;">✓</td></tr> <tr><td style="height: 20px;"></td></tr> <tr><td style="height: 20px;"></td></tr> <tr><td style="text-align: center;">✓</td></tr> </table> </div> | | ✓ | | | ✓ | <p>1 1</p> | <p>correct pattern of ticks for [2] one mistake for [1]</p> <p>a mistake is:</p> <ul style="list-style-type: none"> • a tick in the wrong place • a missing tick • an extra tick <p>accept any unambiguous correct response</p> |
| | | | | | | | | |

| Question | | | Expected Answers | Marks | Additional Guidance |
|----------|-----|------|--|-----------------|--|
| 9 | (a) | (i) | $N = PV/kT;$ $T_A = 27 + 273 = 300 \text{ K};$ $N = 1.1(4) \times 10^{22}$ | 1 1 1 | evidence of this rule (as algebra or substitution of numbers) [1] accept $PV = NkT$ or nkT or nRT or NRT as the rule correct conversion of °C to K for [1] ecf incorrect conversion of °C to K e.g. $T_A = 27 \text{ K}$ gives 1.3×10^{23} for [2] correct reverse calculation for [3]: $N = 1 \times 10^{22}$ gives $T = 343 \text{ K}$ for [2] and therefore 70°C for [1] $N = 1 \times 10^{22}$ and $T = 300 \text{ K}$ gives $V = 4.2 \times 10^{-4} \text{ m}^3$ for [3] $N = 1 \times 10^{22}$ and $T = 300 \text{ K}$ gives $P = 8.8 \times 10^4 \text{ Pa}$ for [3] use of $k = 1.38 \times 10^{-23}$ gives $N = 1.16 \times 10^{22}$ for [3] |
| | | (ii) | $P_B = 20 \times 10^5 \text{ Pa};$ full value N from (i) gives $T_B = 750 - 273 = 477 \text{ }^\circ\text{C};$ accept answers rounded to 2 sig fig | 1 1 | evidence of correct reading off graph for [1] allow $P_B = 17$ to $21 \times 10^5 \text{ Pa}$ for [1] and subsequent calculation for [1] no ecf for $P_B = 20$ $N = 1 \times 10^{22}$ gives $T_B = 857 \text{ K}$ and 584°C for [2] $N = 1.1 \times 10^{22}$ gives $T_B = 779 \text{ K}$ and 506°C for [2] $N = 1.14 \times 10^{22}$ gives $T_B = 752 \text{ K}$ and 479°C for [2] accept correct reverse calculation for [2] e.g. $T = 273 + 500 = 773 \text{ K}$ and $N = 1 \times 10^{22}$ gives $V = 5.4 \times 10^{-5} \text{ m}^3$ [1] comparable to $6 \times 10^{-5} \text{ m}^3$ [1] e.g. $T = 273 + 500 = 773 \text{ K}$ and $N = 1 \times 10^{22}$ gives $P = 1.8 \times 10^6 \text{ Pa}$ [1] comparable to $20 \times 10^5 \text{ Pa}$ [1] |

| Question | | Expected Answers | Marks | Additional Guidance |
|-----------------|------|---|-----------|--|
| (b) | (i) | increased their speed/velocity; | 1 | not just increase of kinetic energy |
| | | greater momentum change per collision (with the walls); | 1 | look for complete statement for [1] |
| | | increases rate of collisions (with walls) | 1 | not just more collisions QWC should include the full story for the third mark |
| | (ii) | number of molecules / particles doesn't change; $T = \frac{PV}{Nk} = \frac{35 \times 10^5 \times 0.5 \times 10^{-4}}{1.14 \times 10^{22} \times 1.4 \times 10^{-23}} = 1096 \text{ K}$ | 1 1 | NOT just ideal gas N: 1×10^{22} gives 1250 K for [1] V = $0.6 \times 10^{-4} \text{ m}^3$ gives 1316 K or 1500 K for [1] look for correct method with sensible values and answer between 1522 K and 1090 K |
| (c) | | <u>work</u> done by gas; equals decrease in internal energy | 1 1 | for example: gas does work on the piston for [1] work done by gas equals decrease in internal energy for [2] |
| Total Q9 | | | 12 | |

| Question | | Expected Answers | Marks | Additional Guidance |
|----------|-----|--|----------|---|
| 10 | (a) | (i) | 1 | accept EM waves instead of light / microwaves (not IR, UV ...) look for pulses of radiation from Earth to Moon and back to Earth |
| | | | 1 | look for how to calculate the distance for [1] accept a formula e.g. $d = ct/2$ |
| | | assumes: speed of light same all the way through the journey / same time for both halves of journey | 1 | accept effect of atmosphere is negligible (on speed of EM wave) QWC candidates who cannot spell correctly cannot earn more than [2] |
| | | (ii) | 1 | look for correct method of conversion to seconds for [1] |
| | | $t = 27 \times 24 \times 3600 = 2.3 \times 10^6 \text{ s}$ $v = \frac{2\pi r}{t} = \frac{2\pi \times 3.8 \times 10^8}{2.3 \times 10^6} = 1.02 \times 10^3 \text{ m s}^{-1}$ | 1 | accept ecf from incorrect t for [1] e.g. 27 s gives $8.8 \times 10^7 \text{ m s}^{-1}$ for [1] 27 × 24 s gives $3.7 \times 10^6 \text{ m s}^{-1}$ for [1] 27 × 24 × 60 s gives $6.1 \times 10^4 \text{ m s}^{-1}$ [1] accept correct reverse calculation for [2] e.g. $v = 1000 \text{ m s}^{-1}$ gives $2.4 \times 10^6 \text{ s}$ [1] which is 27.6 days [1] |
| | (b) | (i) | 1 | arrow from centre of Moon towards centre of Earth for [1] accept arrow pushing Moon towards centre of Earth look for extrapolated arrow passing through Earth. |
| | | (ii) | 1 | look for complete argument to award [1] |
| | | (iii) | 1 | use of this rule for [1] |
| | | $F = \frac{mv^2}{r} = \frac{GMm}{r^2}$ $v = 1000 \text{ m s}^{-1}$ gives $5.7 \times 10^{24} \text{ kg}$ $v = 1023 \text{ m s}^{-1}$ gives $5.9 \times 10^{24} \text{ kg}$ | 1 | |
| | | Total Q10 | 9 | |

| Question | | Expected Answers | Marks | Additional Guidance |
|------------------|-----|---|-------------|--|
| 11 | (a) | (i) | 1 | accept volume of an atom/particle is d^3 |
| | | (ii) | 1 1 | correct rearrangement for density with symbols or numbers for [1] award [1] for correct calculation of $d^3 = 1.2 \times 10^{-29} \text{ m}^3$ |
| | (b) | (i) | 1 | full value d from (ii) gives $2.312 \times 10^{-10} \times 1.3 \times 10^{11} = 30.1 \text{ N m}^{-1}$ $d = 2.31 \times 10^{-10} \text{ m}$ gives 30.0 N m^{-1} for [1] $d = 2.3 \times 10^{-10} \text{ m}$ gives 29.9 N m^{-1} for [1] $d = 2 \times 10^{-10} \text{ m}$ gives 26 N m^{-1} for [1] accept correct reverse calculation for [1] e.g. $k = 30 \text{ N m}^{-1}$, $d = 2.3 \times 10^{-10} \text{ m}$ gives $E = 1.30 \times 10^{11} \text{ Pa}$ |
| | | (ii) | 1 | k/d is $(\text{N m}^{-1})(\text{m}^{-1}) = \text{N m}^{-2}$ look for correct units for k and d combined correctly to give N m^{-2} |
| | (c) | (i) | 1 |  accept any constant amplitude, look for correct peaks and zero-crossing points across whole timespan, cosine curve. at least one of the curves for (i) or (ii) must be clearly labelled for marks to be awarded. |
| | | (ii) | 1 |  any constant amplitude, must be positive, and correct pattern across timespan ecf incorrect phase of velocity-time graph - peak energy to coincide with peak speed accept full-wave rectified cosine wave |
| | (d) | $A = 0.15 \times 2.3 \times 10^{-10} = 3.5 \times 10^{-11} \text{ m};$ $E = kA^2 / 2 = 1.8 \times 10^{-20} \text{ J};$ $T_m = E/k = 1.8 \times 10^{-20} / 1.4 \times 10^{-23} = 1280 \text{ K}$ | 1 1 1 | $2 \times 10^{-10} \text{ m}$ gives $3 \times 10^{-11} \text{ m}$ for [1] $2 \times 10^{-10} \text{ m}$ gives $1.4 \times 10^{-20} \text{ J}$ for [1] $2 \times 10^{-10} \text{ m}$ gives 960 K for [1] look for calculation of amplitude for [1], energy for [1] and T_m for [1] with ecf from one step to the next. |
| Total Q11 | | | 10 | |

| Question | | | Expected Answers | Marks | Additional Guidance |
|------------------|-----|------|--|-------------|---|
| 12 | (a) | (i) | $E_T = 1.3 \times 10^{-20} \text{ J};$ $f = E/h = 2.0 \times 10^{13} \text{ Hz};$ $\lambda = c/f = 1.47 \times 10^{-5} \text{ m}$ | 1 1 1 | correct answer for [3] allow ecf from incorrect E $E = kT$ gives $2.36 \times 10^{-5} \text{ m}$ for [2] allow ecf from incorrect f accept $1.5 \times 10^{-5} \text{ m}$ |
| | | (ii) | infrared | 1 | accept any correct and unambiguous response allow ecf from incorrect (i) X-rays below $1 \times 10^{-9} \text{ m}$ ultraviolet from $1 \times 10^{-9} \text{ m}$ to $4 \times 10^{-7} \text{ m}$ visible from $4 \times 10^{-7} \text{ m}$ to $8 \times 10^{-7} \text{ m}$ infrared from $8 \times 10^{-7} \text{ m}$ to $1 \times 10^{-3} \text{ m}$ microwaves above $1 \times 10^{-3} \text{ m}$ |
| | (b) | | current is determined by rate at which electrons leave the surface owtte; probability that an electron will (have energy ϵ to) be able to leave the surface (at temperature T) is proportional to BF ($e^{-\epsilon/kT}$); | 1 1 | accept current is electrons per second owtte for [1] accept proportion of electrons able to leave the surface |
| | (c) | (i) | $\ln I = \ln C - \epsilon/kT$ | 1 | look for this formula in the response accept \log_e but not \log |
| | | (ii) | gradient = $5.0 \times 10^4 \pm 0.5 \times 10^4$ $\epsilon = 7.0 \times 10^{-19} \pm 0.7 \times 10^{-19} \text{ J}$ | 1 1 | allow ecf only from incorrect gradient calculation for [1] e.g. $\epsilon = 7.0 \times 10^{-22} \text{ J}$ for [1] watch out for one point from graph instead of gradient for [0] |
| Total Q12 | | | | 9 | |
