# A-level PHYSICS

Paper 3

Section B Astrophysics

Monday 3 June 2019

Afternoon

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 50 minutes on this section.

## Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Show all your working.

For Examiner's Use

Question	Mark

<b>TOTAL</b>	

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 35.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

**7408/3BA**

**Section B**Answer **all** questions in this section.**0 1 . 1** The lenses used in refracting telescopes can cause chromatic aberration.Complete **Figure 1** to show how a lens produces chromatic aberration.**[1 mark]****Figure 1****0 1 . 2** A Cassegrain telescope uses mirrors.

What are the shapes of the primary and secondary mirrors in a Cassegrain telescope?

Tick (✓) **one** box.**[1 mark]**

Primary mirror	Secondary mirror	
concave	concave	<input type="checkbox"/>
concave	convex	<input type="checkbox"/>
convex	concave	<input type="checkbox"/>
convex	convex	<input type="checkbox"/>

0 1 . 3

**Table 1** contains information about two telescopes, **A** and **B**. Each telescope is planned to be the biggest of its type in the world.

**Table 1**

Telescope	A	B
Type	Optical reflecting telescope	Radio telescope
Diameter / m	39.3	110
Range of wavelengths detected	350 nm to 1800 nm	2.5 mm to 1000 mm

Discuss the similarities and differences between optical reflecting telescopes and radio telescopes. Your answer should include references to:

- structure
- positioning
- collecting power.

Go on to discuss which telescope, **A** or **B**, will give a more detailed image of an astronomical object that emits both radio waves and visible light.

**[6 marks]**

Turn over ►

Do not write  
outside the  
box

Lined writing area consisting of multiple horizontal lines for text entry.

0 2

**Table 2** shows some properties of the four brightest stars in the constellation Canis Minor.

**Table 2**

Name	Apparent magnitude	Absolute magnitude	Spectral class
Gamma A	4.46	-0.50	K
Gomeisa	2.89	-0.70	B
HD 66141	4.39	-0.13	K
Procyon	0.34	2.65	F

0 2 . 1

Discuss, with reference to the Hipparcos scale, why many star maps show only two stars in the constellation Canis Minor.

**[3 marks]**

---

---

---

---

---

---

0 2 . 2

State and explain which star in **Table 2** has the most prominent Hydrogen Balmer absorption lines.

**[2 marks]**

0 3

Figure 2 is a Hertzsprung-Russell (HR) diagram.

0 3 . 1

Label the absolute magnitude axis with a suitable scale.

[1 mark]

0 3 . 2

Label with an **S** the position of the Sun on the HR diagram.

[2 marks]

0 3 . 3

Draw a line on the HR diagram to show the evolution of a star similar to the Sun from formation to white dwarf.

[2 marks]

0 3 . 4

Label with a **P** the position on the HR diagram of a star much redder, and with a greater power output, than the Sun.

[1 mark]

0 3 . 5

A star much more massive than the Sun may become a supernova and then a black hole.

Discuss whether supernovae and black holes can be placed on the HR diagram in **Figure 2**.
