Pearson Edexcel GCSE In Physics (1PH0) Paper 1H

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

## **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Mark schemes have been developed so that the rubrics of each mark scheme reflects the characteristics of the skills within the AO being targeted and the requirements of the command word. So for example the command word 'Explain' requires an identification of a point and then reasoning/justification of the point.

Explain questions can be asked across all AOs. The distinction comes whether the identification is via a judgment made to reach a conclusion, or, making a point through application of knowledge to reason/justify the point made through application of understanding. It is the combination and linkage of the marking points that is needed to gain full marks.

When marking questions with a 'describe' or 'explain' command word, the detailed marking guidance below should be consulted to ensure consistency of marking.

| Assessment<br>Objective |              | Commai  | nd Word   |
|-------------------------|--------------|---|---|
| Strand                  | Element      | Describe  | Explain   |
| AO1*                    |              | An answer that combines the marking points to provide a logical description   | An explanation that links identification of a point with reasoning/justification(s) as required   |
| AO2                     |              | An answer that combines the marking points to provide a logical description, showing application of knowledge and understanding | An explanation that links identification of a point (by applying knowledge) with reasoning/justification (application of understanding) |
| AO3                     | 1a and<br>1b | An answer that combines points of interpretation/evaluation to provide a logical description                                    |   |
| AO3                     | 2a and<br>2b |   | An explanation that combines identification via a judgment to reach a conclusion via justification/reasoning                            |
| AO3                     | За           | An answer that combines the marking points to provide a logical description of the plan/method/experiment                       |   |
| AO3                     | 3b           |   | An explanation that combines identifying an improvement of the experimental procedure with a linked justification/reasoning             |

<sup>\*</sup>there will be situations where an AO1 question will include elements of recall of knowledge directly from the specification (up to a maximum of 15%). These will be identified by an asterisk in the mark scheme.

| Qustion<br>Number | Answer  | Mark       |
|-------------------|---|------------|
| 1a                | Once DTP redraw image, crop and insert here.  A is not correct because the angle of incidence is not equal to the angle of reflection  C is not correct because glass is more optically dense than air  D is not correct because glass is more optically dense than air | (1)<br>AO1 |

| Question<br>Number | Answer  | Additional guidance                                       | Mark       |
|--------------------|---|---|------------|
| 1(b)(i)            | substitution (1) $\frac{18.0 \pm 1}{7.0 \pm 1}$ |   | (2)<br>AO2 |
|                    | OR  3.5±0.2  1.4±0.2                            |   |            |
|                    | evaluation (1)<br>2.6 ± 0.5                     | award full marks for<br>correct answer<br>without working |            |

| Question<br>Number | Answer   | Additional guidance   | Mark       |
|--------------------|--|---|------------|
| 1(b)(ii)           | a description to including one pair of: use different lens/replace lens (1)  |   | (2)<br>AO3 |
|                    | {higher power / shorter focal length / fatter / thicker / more curved / greater refractive index / more convex} lens (1) | accept<br>stronger<br>curvature of<br>lens<br>increased (2) |            |
|                    | OR   |   |            |
|                    | change the distance / move the lens / move the object (1)  |   |            |
|                    | further away (from the object/lens) (1)  | increase<br>distance<br>between<br>object and<br>lens (2)   |            |

| Question<br>Number | Answer  | Additional guidance   | Mark       |
|--------------------|---|---|------------|
| 1(c)               | substitution (1) $\frac{1}{f} = \frac{20+40}{20\times40}$ evaluation of $\frac{1}{f}$ (1) | accept $\frac{1}{f} = \frac{60}{800} \text{ OR } \frac{1}{f} = \frac{3}{40}$  | (3)<br>AO2 |
|                    | evaluation of f (1)  13 (cm)  | accept 13.3 (cm) 13.33 (cm) power of ten error on 13 gains 2 marks  0.075 on answer line gains 2 marks  power of ten error on 0.075 gains 1 mark $\frac{40}{3}$ scores 2 marks  award full marks for correct answer without working |            |

(Total for Question 1 = 8 marks)

| Question<br>Number | Answer  | Mark       |
|--------------------|---|------------|
| 2(a)               | B. when there are energy transfers, the total energy does not change  | (1)<br>AO1 |
|                    | <ul> <li>A is not correct because the total energy does not reduce</li> <li>C is not correct because the total energy does not reduce</li> <li>D is not correct because the total energy does not increase</li> </ul> |            |

| Question<br>Number | Answer  | Additional guidance                                       | Mark       |
|--------------------|---|---|------------|
| 2(b)(i)            | a diagram showing:  |   | (3)<br>AO2 |
|                    | <ul><li>apparatus labelled to include <b>three</b> from</li><li>thermometer</li><li>water</li></ul> | independent of arrangement                                |            |
|                    | <ul> <li>insulator / sand / sawdust /<br/>material</li> </ul>                                       | ignore kettle and<br>stop clock                           |            |
|                    | • (copper) can (1)  |   |            |
|                    | thermometer in the <b>water</b> (1)   |   |            |
|                    | arrangement for water and insulator in<br>and between copper cans (e.g. as in<br>diagram below) (1) | accept reverse<br>positions for<br>water and<br>insulator |            |
|                    | thermometer   |   |            |
|                    | insulation small copper can   |   |            |

| Question<br>Number | Answer   | Additional guidance   | Mark       |
|--------------------|--|---|------------|
| 2(b)(ii)           | any <b>three</b> factors from:<br>{mass / volume} of water (1) | accept amount / specified values / "how much"   | (3)<br>AO3 |
|                    | {volume / thickness / mass}<br>of insulators / materials (1)   | accept amount / specified<br>values / "how much"                                      |            |
|                    | {starting / initial} temperature of water (1)                  | accept temperature of hot /<br>boiling water / specified<br>values                    |            |
|                    | time interval / temperature change (1)                         | accept specified values of interval or change unqualified "same time" is insufficient |            |

|      | Answer  | Additional guidance  | Mark       |
|------|---|--|------------|
| 2(c) | a description giving  |  | (2)<br>AO2 |
|      | as the density (of expanded polystyrene) increases the (thermal) conductivity decreases (1) | ORA  |            |
|      | non-linear / gradient decreases / at a decreasing rate / levels off / plateaus /            | allow inversely<br>proportional / exponential<br>for non-linear in this<br>context |            |
|      | becomes (almost) constant (1)   | ignore negative correlation unqualified quoted values are insufficient             |            |

|         | Answer   | Additional guidance   | Mark       |
|---------|--|---|------------|
| 3(a)(i) | an explanation linking <b>two</b> from:  | accept reverse arguments throughout   | (2)<br>AO1 |
|         | (wet road means) less / no<br>friction (between tyres and<br>road) (1)   | accept (road) more slippery /<br>less grip<br>accept idea of reduced visibility |            |
|         | (wet weather means) increased stopping distance (1)  | accept braking or thinking distance in this context                             |            |
|         |  | accept takes longer to slow<br>down / stop<br>ignore harder to brake            |            |
|         | (slower speed means)<br>shorter braking / stopping<br>distance (1)   |   |            |
|         | (dry weather / slower<br>speed) reduces possibility<br>of skidding / sliding / idea<br>of losing control / crashing<br>(1) |   |            |

|          | Answer  | Additional guidance  | Mark       |
|----------|---|--|------------|
| 3(a)(ii) | convert <b>either</b> distance or time (1)                                  |  | (2)<br>AO2 |
|          | (31 m =) $\frac{31}{1000}$ (km)<br>or 0.031 (km)                            | (130 km =) 130 × 1000 (m)<br>or 130 000 (m)  |            |
|          | OR  | OR   |            |
|          | (1 s =) $\frac{1}{3600}$ (h) = $\frac{1}{60 \times 60}$ (h) or 0.000 28 (h) | (1 h =) 60 x 60 (s)<br>or 3600 (s)   |            |
|          | evaluation (1)  |  |            |
|          | (31 m/s =) 110 (km/h)   | (130 km/h =) 36(.1)(m/s)   |            |
|          |   | accept 111.6 or 112 (km/h)<br>for 2 marks  |            |
|          |   | if no other marks awarded accept <u>1860 m/min</u> and <u>2167 m/min</u> for 1 mark each |            |
|          |   | award full marks for the correct answer without working                                  |            |

|           | Answer   | Additional guidance   | Mark       |

| Indicative content   | Mark  |
|--|---|
| Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme.  The indicative content below is not prescriptive, and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant.  AO1  | (6)<br>AO1  |
| Comparison X-rays: high frequency / short wavelength / ionising / high energy Radio waves: low frequency / long wavelength / not ionising / low energy   |   |
| <ul> <li>X ray are used</li> <li>in medical diagnosis, to find broken bones, damage to lungs</li> <li>radiotherapy</li> <li>treatment of cancer</li> <li>airport security</li> <li>revealing counterfeit art</li> </ul>  |   |
| X-rays are emitted when electrons change energy levels because  • electrons in lower energy levels can absorb energy • the electrons move to higher energy levels • when the electrons return to a lower energy level • the electrons lose energy as radiation. • the electrons need to lose a large amount of energy • (so that) they emit x-ray radiation of high energy/frequency •  Radio waves are used • broadcasting television • broadcasting radio • communications • satellite transmissions • mobile phones • radar |   |
|  | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme.  The indicative content below is not prescriptive, and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant.  AO1  Comparison  X-rays: high frequency / short wavelength / ionising / high energy Radio waves: low frequency / long wavelength / not ionising / low energy  X ray are used  in medical diagnosis, to find broken bones, damage to lungs radiotherapy treatment of cancer airport security revealing counterfeit art  X-rays are emitted when electrons change energy levels because electrons in lower energy levels can absorb energy when the electrons return to a lower energy level when the electrons lose energy as radiation. the electrons lose energy as radiation. the electrons need to lose a large amount of energy (so that) they emit x-ray radiation of high energy/frequency  Radio waves are used  broadcasting television broadcasting radio communications satellite transmissions mobile phones |

| 1 | <del>-</del>   |  |
|---|--|--|
|   | Radio-waves are emitted when  • electrons oscillate in electrical circuits   |  |
|   | oscillations are   |  |
|   | current (flow of electrons) that   |  |
|   | continually change direction   |  |
|   | <ul> <li>current flows up and down in a</li> </ul>   |  |
|   | (transmitting) aerial  |  |
|   | <ul> <li>alternating current (AC)</li> </ul>   |  |
|   | <ul> <li>this generates radio waves in the air</li> </ul>  |  |
|   | around the aerial  |  |
|   | <ul> <li>the frequency of the radio waves</li> </ul>   |  |
|   | corresponds to the oscillation frequency   |  |
|   | N.B. No credit is given for: Electrons within an atom go through energy changes OR Radio waves are produced in electrons in circuits These phrases are in the stem of the question |  |

| Level   | Mark | Descriptor   |  |
|---------|------|--|--|
|         | 0    | No rewardable material.  |  |
| Level 1 | 1-2  | Demonstrates elements of physics understanding, some of which is inaccurate. Understanding of scientific, enquiry, techniques and procedures lacks detail. (AO1)  Presents a description which is not logically ordered and with significant gaps. (AO1)   |  |
| Level 2 | 3-4  | significant gaps. (AO1)  Demonstrates physics understanding, which is mostly relevant but may include some inaccuracies. Understanding of scientific ideas, enquiry, techniques and procedures is not fully detailed and/or developed. (AO1)  Presents a description of the procedure that has a structure |  |
|         |      | which is mostly clear, coherent and logical with minor steps missing. (AO1)  |  |
| Level 3 | 5-6  | Demonstrates accurate and relevant physics understanding throughout. Understanding of the scientific ideas, enquiry, techniques and procedures is detailed and fully developed. (AO1)  |  |
|         |      | Presents a description that has a well-developed structure which is clear, coherent and logical. (AO1)   |  |

| Level   | Mark                        | Additional Guidance   | General additional guidance - the decisions within levels   |
|---------|-----------------------------|---|---|
|         | 0                           | No rewardable material  |   |
| Level 1 | 1-2                         | Additional guidance   | Possible candidate response   |
|         |                             | Elements of physics present i.e. isolated knowledge of principles, <b>two</b> | any use of X rays   |
|         |                             | unconnected statements  | any use of radio waves  |

| Level   | Mark | Additional Guidance   | General additional guidance - the decisions within levels  |
|---------|------|---|--|
|         | 0    | No rewardable material  |  |
| Level 1 | 1-2  | Additional guidance   | Possible candidate responses   |
|         |      | Elements of physics present i. e. isolated knowledge of principles, <b>two</b> unconnected statements from any section  | core is liquid/ mantle (crust) is solid  |
|         |      |   | waves refract  |
|         |      |   | P waves change direction   |
|         |      |   | S and P waves travel through mantle(crust)   |
|         |      |   | at A, S and P waves detected   |
|         |      |   | at B, no waves detected  |
|         |      |   | at C, only P waves detected  |
|         |      |   | S waves are transverse   |
|         |      |   | P waves are longitudinal   |
| Level 2 | 3-4  | Additional guidance   | Possible candidate response  |
|         |      | Some knowledge of principles with a logical connection made in <b>ONE</b> section and a statement in <b>ONE</b> other  Or  From ONE section detailed knowledge of principles with logical connections | at A, S and P waves are detected so must pass through solid  |
|         |      |   | at B no waves are detected, the waves change<br>direction/ Region B is the shadow zone                                     |
|         |      |   | at C, P waves are detected because they go straight through the Earth/can travel through the core                          |
|         |      |   | in Earth's core there are different densities/waves change direction   |
| Level 3 | 5-6  | Additional guidance   | Possible candidate response  |
|         |      | Detailed knowledge of principles with logical connections made in <b>TWO</b> of the sections  | at A, S and P waves are detected so must pass through solid and refract/curve  |
|         |      |   | at B, no waves are detected because S waves do not pass through liquid core and P waves are refracted away by the liquid.  |
|         |      |   | At C, only P waves are detected because they can pass through the liquid core and change direction in the core( refracted) |
|         |      |   | In the Earth's core there is refraction of waves/ inner and outer core have different densities                            |
