Advanced GCE

Mark Scheme for November 2020

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

© OCR 2020

Annotations

Annotation	Meaning
DO NOT ALLOW	Answers which are not worthy of credit
IGNORE	Statements which are irrelevant
ALLOW	Answers that can be accepted
( )	Words which are not essential to gain credit
__	Underlined words must be present in answer to score a mark
ECF	Error carried forward
AW	Alternative wording
ORA	Or reverse argument

Marking Annotations

Annotation	Use
BOD	Benefit of Doubt
CON	Contradiction
	Cross
ECF	Error Carried Forward
GM	Given Mark
	Extendable horizontal wavy line (to indicate errors / incorrect science terminology)
I	Ignore
	Large dot (various uses as defined in mark scheme)
	Highlight (various uses as defined in mark scheme)
NBOD	Benefit of the doubt not given
	Tick
^	Omission Mark
BP	Blank Page
L1	Level 1 answer in Level of Response question
L2	Level 2 answer in Level of Response question
L3	Level 3 answer in Level of Response question

Subject Specific Marking Instructions

INTRODUCTION

Your first task as an Examiner is to become thoroughly familiar with the material on which the examination depends. This material includes:

- the specification, especially the assessment objectives
- the question paper
- the mark scheme.

You should ensure that you have copies of these materials.

You should ensure also that you are familiar with the administrative procedures related to the marking process. These are set out in the OCR booklet **Instructions for Examiners**. If you are examining for the first time, please read carefully **Appendix 5 Introduction to Script Marking: Notes for New Examiners**.

Please ask for help or guidance whenever you need it. Your first point of contact is your Team Leader.

Question			Answer	Mark	AO element	Guidance
1	(a)	i	*Explanation must be qualified and correspond to the variable* *Credit any two pairs* speed / gradient (of treadmill) ✓ *because (*higher speed/gradient) creates higher energy demands for body and higher heart rates ✓ health of participant / smoking ✓ *because* heath conditions / smoking, (may) increases heart rate ✓ BMI / obesity ✓ *because* high(er) BMI / obesity, increases heart rate ✓ sex ✓ *because* males (tend to) have higher heart rate ✓ age of participants ✓ *because* older people have lower heart rates ✓ initial fitness of the subject ✓ *because* fitter people have lower (resting) heart rates ✓	max 4	AO 2.7	**ALLOW** 'pulse rate' as alternative wording for 'heart rate' **IGNORE** 'speed person ran' as unrelated to the treadmill

1	**(a)**	**ii**	*Any two from* from a larger sample so, more (likely to be) reliable ✓ peer reviewed so, conclusions more valid ✓ different methods (may have been used) so, achieved reproducibility ✓ *idea that* procedure used to collect secondary data (may have) used a more, accurate / precise, methodology, so improved accuracy of data (obtained) ✓	max 2	AO 2.5	Must explain point for mark
	(b)	**i**	*Description* (slight) increase in heart rate ✓ *Explanation* anticipatory response/ increases delivery of oxygen to muscles in anticipation of exercise OR caused by release of, neurotransmitters / noradrenaline / adrenaline ✓	2	AO 2.3	**ALLOW** use of data to show increase of heart rate **IGNORE** 'HR changes' as this could be an increase or a decrease in the HR
1	**(b)**	**ii**	23925 **AND** $cm^3\ min^{-1}$ ✓	1	AO 2.4	Correct answer only: 165 x 145 = 23925 Must include units for mark. **ALLOW** correct answer in other form, e.g. 23.925$dm^3\ min^{-1}$, 23925 ml min^{-1}
1	**(b)**	**iii**	less time for ventricles to fill so, stroke volume is lower ✓	1	AO 2.3	**ALLOW** ref to incomplete filling of ventricles and reduced SV

1	**(c)**	**i**	<table><tr><td>Elevation of the ST section</td><td>✓</td></tr><tr><td>Abnormally shaped P-wave</td><td></td></tr><tr><td>Deep S wave</td><td></td></tr></table>	1	AO 1.2	
1	**(c)**	**ii**	(cardiac) muscle in atrial wall contracts, arrhythmically / in an uncoordinated way **AND** inefficient filling of ventricles ✓	1	AO 2.5	

<table>
<tr><td>1</td><td>(d)</td><td></td><td colspan="4">Read through the whole answer. (Be prepared to recognise and credit unexpected approaches where they show relevance.)
Using a 'best-fit' approach based on the science content of the answer, first decide which of the level descriptors, Level 1, Level 2 or Level 3, best describes the overall quality of the answer. Then, award the higher or lower mark within the level, according to the Communication Statement (shown in italics): award the higher mark where the Communication Statement has been met.
Award the lower mark where aspects of the Communication Statement has been missed.
• The science content determines the level.
•The Communication Statement determines the mark within a level.
A level annotation should be used where all marks for a level have been achieved e.g. for 6 marks L3, 5 marks L3^ etc.
No marks (0) should have a cross</td></tr>
<tr><td></td><td></td><td></td><td>Level 3 (5-6 marks)
Describes and explains both benefits and drawbacks, with conclusion drawn. Detailed evidence of using information from both statements 1 and 2. There is a well-developed line of reasoning, which is clear and logically-structured and uses scientific terminology at an appropriate level. The information presented is relevant and substantiated.

Level 2 (3-4 marks)
Describes some benefits and drawbacks and explains at least one benefit and at least one drawback in detail. Evidence of using information from either statements 1or statements 2.
There is a line of reasoning presented with some structure and use of appropriate scientific language. The information presented in the most part relevant and supported by some evidence.

Level 1 (1-2 marks)
Describes some benefits or drawbacks. Information from statement 1 and 2 may not be stated clearly.
There is an attempt at a logical structure with a line of reasoning. The information is mostly relevant.

0 marks</td><td>6</td><td>AO 3.2</td><td>Indicative marking points may include:

Benefits/ advantages :
Unexplained symptoms may have an effect on quality of life and may lead to anxiety
Patients are reassured and further investigations can be avoided
Results are immediately available
Less disruption to lifestyle than other cardiac monitors
Less additional cost to NHS than cardiac monitors.
The knowledge allows doctors to make more informed treatment decisions e.g. such as medication dosage
Other indicators of (later onset) heart disease are painful and frightening – e.g. pressure in chest, breathlessness, discomfort
Patient is involved in diagnosis of symptoms
Less need for training in emergency treatment of heart attacks e.g. defibrillator, CPR
Median time from symptoms to diagnosis relatively short
Less need for GP/ consultant appointment time
No need for specialist to fit device</td></tr>
</table>

			No response or no response worthy of credit.			*Drawbacks/disadvantages:* • (Older) people, who are at greater risk of heart disease, may not possess compatible smartphones • Patients may not use the smartphone app correctly • No evidence of correlation between use of smartphone app and decreased GP consultation • New device not fully tested on trialled over many years • May create fear /worry from user as they can access data / trace in real time • Battery life of smartphone may affect the long-term use of the app • Quality of trace not as good as the CEM /standard hospital ECG with 12 electrodes • Older people, who are at greater risk of heart disease, may not have confidence in technology • Less data is collected as a result of lack of continual recording (as compared to CEM being worn continuously) • Patients may not use the app if they fail to recognise their own symptoms

In summary:
Read through the whole answer. (Be prepared to recognise and credit unexpected approaches where they show relevance.)
Using a ‘best-fit’ approach based on the science content of the answer, first decide which of the level descriptors, Level 1, Level 2 or Level 3, best describes the overall quality of the answer.
Then, award the higher or lower mark within the level, according to the Communication Statement (shown in italics):
○ award the higher mark where the Communication Statement has been met.
○ award the lower mark where aspects of the Communication Statement have been missed.
• The science content determines the level.
• The Communication Statement determines the mark within a level.</td></tr>
<tr><td></td><td></td><td></td><td>Level 3 (5–6 marks)
Balanced, detailed evaluation with both supporting and undermining statements using information from Fig. 2.2a and Fig. 2.2b/c
There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.

Level 2 (3–4 marks)
Evaluation with both supporting and undermining statements using information from Fig. 2.2a and Fig. 2.2b/c
There is a line of reasoning presented with some structure. The information presented is in the most-part relevant and supported by some evidence.

Level 1 (1–2 marks)
Limited evaluation with basic descriptive statements that may not include reference to Fig. 2.2a and Fig. 2.2b/c
The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.

0 marks
No response or no response worthy of credit.</td><td>6</td><td>AO3.2
AO3.3</td><td>Indicative scientific points may include (not exhaustive):
ALLOW ORA to shade species throughout

Supporting statements:
• chloroplast from M.o (2.2a) shows more similar ultrastructure to M. g chloroplast in sun conditions (2.2b)
• chloroplast from M.o (2.2a) and chloroplast from M.g in sun conditions have similar sized grana / thylakoid stacks (2.2b)
• chloroplast from M.o (2.2a) and chloroplast from M.g in sun conditions (2.2b) have similar numbers of grana
• chloroplast from M.o (2.2a) and chloroplast from M.g in sun conditions (2.2b) have similar numbers of thylakoids per granum
• chloroplast from M.o (2.2a) don’t need as many thylakoids / grana for light capture as they are in high light intensity
• fewer thylakoids in both chloroplasts from M.o (2.2a) and chloroplasts from M.g in sun conditions (2.2b) than chloroplast from M.g in shade conditions (2.2c)</td></tr>
</table>

						Undermining statements: • only have **one** drawing of a chloroplast from each micrograph • student's drawings may be inaccurate • chloroplasts / leaves from extinct species may have been damaged • images / electron micrographs may have been poor quality • methods of obtaining the leaf samples may have been different • more data required to draw this conclusion • there (maybe) different numbers of chloroplasts in different species • there (maybe) different numbers of leaves in different species

Question			Answer	Mark	AO	Guidance
3	(a)	(i)	*Line measured as 112mm = 28.0* (μm) *and 114mm = 28.5* (μm) 28.0 to 28.5 (μm) ✓✓	2	AO 2.8	*Only allow values within the range (using image size 112 to 114)* **ALLOW** one mark as ECF for incorrect measurement provided there is evidence of rearranging formula **AND** showing working **AND** answer given to 3 sf i.e. = incorrect measured value / 4000 = ECF value to 3sf
3	(a)	(ii)	iodopsin ✓	1	AO1.1	
3	(a)	(iii)	*MARK FIRST TWO REPONSES* procedure is more technical / requires more advanced practical skills / AW ✓ further detail of skill required e.g. complex staining process needed to prepare specimens ✓ artefacts may occur ✓	2 max	AO 2.7	**IGNORE** Specimens must be placed in a vacuum and so must be dehydrated / dead as image 3.1 is a section of tissue **IGNORE** reference to black and white images as this is not related to the preparation of the image **IGNORE** references to cost
